Ganesh Sawant | Sync process for Dubai server

On India server we are doing syncing of database and case images.

For database sync Every 6 month sql created month wise and store on azure.

For case images, after 6 month remove from working server and store on azure.

Do you need same functionality here?

Dear Kailash,

We have referred the above information thread stating syncing of database and case images.

We are okay with the idea of data and image sync done at your end in any form at your end, our main concern will be of accessing the database conveniently at our request along with data and images of those reports. With reference to our requirement there may be a possibility wherein we will require the data which is 6 months older or even for last 3 years. During that point of time on our email request the complete data and images must be easily available with PAMAC RES team or Shimbi team.

Further as the above information is a technical process request to have a word with Ganesh and then do the needful.

Yes, we need bigger capacity.

current capacity till 1Jan 2021 is below

Total objects: 4894354

Total size: 828.117 GBytes (889184238156 Bytes)
