Date : 11/07/2016

Today morning we uploaded one point Fe/Tele separate operation.

There is some queries updated in activity template module for Tele name, also added added some new tables.

There was a subquery executing to fetch Tele name from database which was time consuming.

We did not faced this issue on demo site but on live site because there are lots of users doing operations at the same time.

To resolve this issue we revert all the changes uploaded today.

And system is working fine now.
