Sir.....Consider you Open Country Menu and want add new Country "India". So you add India. After that you change "India" Status Green(Enable) to Red(Disable) in Country master....

Now move next step adding Region/Zone.....You want add Region/Zone for this you need to select first Country and Enter Zone/Region Name.....

If you are Disable Country Name "India:" in country master than this should not be show during the Region/Zone add operation.

But currently it show....This is all module...
