Server space usage

Please share detailed bifurcation of server space usage.

Example: Application - 10 GB, FE log (Dubai) - 1GB, FE log (India) - 5GB, tbl_cases (India) - 10 GB, tbl_cases (Dubai) - 15 GB, etc

Image size to be bifurcated as monthwise for each country.

Please categorise further if required as we need to understand the existing space usage and also to know on space increase requirement.

Below attachment contains pms.resoftech.com : tables and folder size.

For images size will have to create script to check every month. It will take atleast 1 whole day to create script ,test and check in live.

Pamac Live Space List with images.zip

What is activity template - 6GB?

Also share folder size for each month for images for India & Dubai.

Cpanel is shared with you and Sandip.

Please check server space there,

You can find folder/database wise size there.

About country wise size it will require some coding.

Allow developer some time with his current schedule to get size.

I think it is a priority task so push the phase2 merger functionality by a day.

So after SMS module developer will work on it.

Both developers are busy in sms module.

One change now given by sandip for webservice.

Developers are doing sms change.

Not possible phase2 merger on given deadline.
