Dipika Yedge | Close case status update send to mobile

Hi Manas

If Case is closed in backend then backend send me status of closed cases then ,I remove all the data like images and pdf in mobile.

As discussed, we need to add checking twice once during case save and another during case history.

Please confirm or suggest your opinion.

As Discuss,

First i will send you case_id and fe_id in new api. when caseHistory screen is open then backend give me the cases status of the send case_id if the status is closed or send to client then i will delete the data of that case in mobile.

As discussed with Megha the change is

If FE clicks on Case History the API will hit.

If the case status is send to client

Images will be deleted from FE mobile

Please approve

HI

What you are saying is that when (or is it if) the FE clicks on Case history, the app will receive all cases and then based on the status of sent to client, the mobile app can remove the details of the case from the Mobile (data storage - both data and images). Further the case history received from the back end is directly shown in the mobile screen through dynamic form. Thus i don't think (check with Megha) that the app will find out from that list and check the status. - not sure.

My question is - how often does the FE click on case history. Why does he need to know the case history. If he does not click on Case History say for 2 months, then the files/images etc., will remain in the mobile for 2 months

Is this what we want? Please clarify.
