Hello,

As per attached doc, after case is accepted by fe, when saved in mobile local storage on click on that case for any event like save, move, a new webservice api must be called to check if case is still assigned to that Fe or not.

If assigned to a different Fe then remove that case from mobile app local storage.

Hello,

As per discussion with Sir Kailash below are the points to be noted:

- 1) Found additional functions in webservice, having same name with different version, what is their purpose ? Is there any document available for them.
- 2) Check case assigned to Fe code is there in webservice, but it is commented. Why ?
- 3) Also what is to be done with Mobile VAPT points which are in demo server only, when will be go live ?
- 4) Need to optimize and re-structure webservice code also, remove unused code and create proper documentation. This will add development time. Is it ok. Also need Android developer to work together as changes has to be tested from mobile app end.
