pms.resoftech.com : Disk Usage

---

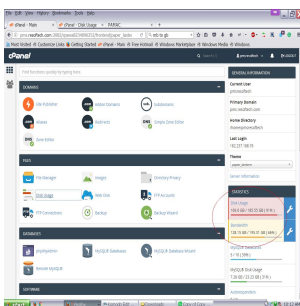

Disk usage has reached 91 %. Screenshot attached.

Following are the ways to reduce disk usage as per discussion with Sir Kailash.

- 1) Remove images by file time for 95 days old.  
If any image is missing for any case , then we can bring only those images from archive.
- 2)Delete images from certain send to client range.
- 3)Increase disk space.

Total space occupied by uploaded case images : 162.64

Please move images to cold storage for India and Dubai for Jan, Feb & Mar 2017.  
That should free almost 44 GB of data. Right?

Wat size of images that we moved? and the list of image names that were moved.

Also i had discussed with Manas, he had moved April images also.

Can we now move tbl\_cases for last 6 months for India on live server?

**Posted By :** Bhavana Pachpande

**Date & Time :** 02-08-2017 11:08:AM

List of images moved are attached below.

Total size was not able to capture during script call.

April images are moved to their respective location.

Can we now move tbl\_cases for last 6 months for India on live server?

As per discussion with Sir Kailash moving bulk amount of records from backup cases table through script will stop the script execution after 5 to 10 min. And since case records are larger , it is suggested to pull the mis directly from backup table. Or use the archive module to pull back case.

If i use archive module to pull back cases, will it not go back to archive table when the cron runs again at midnight?

**Date & Time :** 01-09-2017 03:44:PM

images in april are for open cases, hence cannot be removed.

I have asked for hard disk space increase, will confirm.

Hello Bhavana,

We received email related server's disk space usages is 80%.

Today is 20th Date . Please guide us how we can recover space usage.

Please list out which cron jobs are running and which are we already stop with reason.

**Posted By :** Bhavana Pachpande

**Date & Time :** 23-03-2018 10:51:AM

Cron jobs running and which we have temporarily stopped are given in the excel sheet zipped together with their crop command screenshot and cron files.

Please check.

3 scripts are stopped for removing case images, now are manually removed from server once backup of images is done in local hard disk.

Since images for 3 months are on average 70 to 80 GB, disk space gets full very fast.

We have to continuously monitor that and remove the images when backup is done.

Images deletion script are stopped as because google sync is not working properly. It is from their side as images are backed up by their admin, we do not have any script running in our server for that.

For any further query regarding this you can discuss with Sir Kailash.
