import module

As I got a new in Task from Sandeep sir for :

- Create a controller and a view file .
- With file select box and a import button .
- After that create a Excel Sheet with collumn name case id , fe code , incentive , penalty .
- Then After importing need in array case_id , parent_case_id , activity_id , product_id, verificatio_type_id , fe_id
- As of we need this column in array

Hello sir;

I created a controller and a view file for this . And i make there a file select option and import button . And also created my Excel file .

During this i was creation a function for xls file upload but i got a error there which takes few time by me.I was using ms office for excel

In this error i put 'xls ' in allowed types which cause to make change in

application/config/mimes :

'xls' => array('application/excel', 'application/vnd.ms-excel', 'application/msexcel', 'application/vnd.ms-office'),

remaning process is still on working ,please update config file

I created the controller and now function read the value from excel. Still, I am working with Query for fetching extra stuff from tbl_cases.

Now function giving proper output for XLS file. And I also updated the script for XLSX file too.

Problem completely solved so I am going to close the Discussion.

Thank You!
