AS per discussion with Sandeep, i have checked with other activities also, but the values are showing their.

Points ::

i) The combination of client id, reference no and applicant name is used to create a group as per the coding.

ii) Please check the case ids of the template has client, reference no and applicant name.

iii) The template id present in case table which is used in Export Design, if mentioned (Order value is added) , then the actual case must contain some value in it for that mentioned field to be shown in export excel sheet.

iv) Also check Export Design of "RCU Design".

It has many global templates with same fields added in Excel sheet for export. Example "Supervisor Remark" , "Verification Type". These fields are used multiple times for same Export template.

Please compare RCU Design with other Export template, which is like for client Axis bank.

Hello Bhavana,

For **RCU Global** Export template contain there are more than 45 templates included for exporting the case data.

Now suppose I want to **update the RCU Global** export template then there is no updation happen in while saving the Export template.

I check with debugging on live test server there are 1835 array created and after insert_batch() its return only 36 for me.

Please check it.

insert_batch() not working properly for bulk data.

B312

Date & Time : 18-07-2018 05:09:PM

Issue occurred due insert_batch() function failed for more than 100 records query at a time.

I have updated the function to add insert_batch() in chunks of 100 queries per execution to avoid this. Code is updated for both import and export design in live and test server.

Please check.
