Web list for client template without the verification type | Medium

Hi,

Employee assignment is done for individual templates with all the fields selected (product, activity and verification type). Employee assignment is also done for one template without selecting the verification type to enable import and export of multiple verification types in one go.

The issue being faced is that in web list, the headers come as applicable to one verification type only (either RV or BV), both office and residence address are not shown.

Please rectify as the system requires to have all the headers of the templates (as selected while designing).

Regards,

Navika

As discussed with Rakhi, an additional global template without the verification type can be created for customised view of header under FE assignment and case verification page.
