Ramakrishnan V | API for ABFL client

Hi,

with reference to our discussion dated 19-may-2022, API integration is required for ABFL client, attaching relevant details shared by client, kindly share your analysis and queried, so that same can be taken further with client.

regards,

ajit kedare

Hello sir,

Below are the following queries :

- 1) What is the URL for sending case data to client ?
- 2) What is the URL for receiving case data from client ?
- 3) Is there any authentication during case data send and receive ?
- 4) What will be the send case data json format, also will the json contain multiple case data i.e array of repeated indexes for each case?
- 5) Is there any validation for fields during send data via api process, like required, string, number, boolean, etc. ?
- 6) What will be the receive case data json format, also will the json contain multiple case data i.e array of repeated indexes for each case?
- 7) For sending images we can send link of images instead of base64 image code, is it ok ? Base64 image code can increase the payload size.
- 8) We will provide an excel for field map of json data with our form template field names.
- 9) What are the following field uses as found in sample folder file name "test 1.json". Need to discuss all of them.

```
"CUSTOMER_ID": "dkyc_v3_cust_12345",
"APPLICATION_ID": "dkycv3apptest12345",
"CUSTOMER_DECLARED_PAN": "ABCDE12345",
"POA_DOC_TYPE": 1,
"NSDL_DETAILS_DATA": {
  "NAME": "IC",
  "PAN": "1234567890"
},
"POA_DETAILS_DATA": {
"DECLARED_DETAILS": {
  "NAME": "IC",
  "DOB": "21/07/1995",
  "ADDRESS": "1234567890"
}
}
```

- 10) We use verification type (VT) to accept any case, where will it be present in the payload ? Similarly filed like product is also used.

Hello sir,

As discussed on last meeting, following flow was proposed:

- 1) Client will send case data to PAMAC via custom api, (not standard api).
- 2) The case will be assigned to Fe and then Fe verifies and submits the case.
- 3) **Client suggested** that on Fe submit the case should again be send directly to them via update api and then they will confirm weather to accept or reject that case.

This we can confirm using polling api to check that case status (accept or reject by client) and then update in our

system as case accepted or rejected by client.

4) Since the above process is skipping out current flow of Supervisor verifying the case then closing it and send to client. Let me know what is to be done here ? How payout and all will be done ?

5) If we process the case at out end i.e after the send to client process we send the case to client for accept or reject then also what will be the process of that case for payout, will the case be re-opened again or deleted in case of rejection?

6) Finally i think we have to generate a report and send to them via api. Need confirmation on this point.

If any of the point is missed during discussion please add here.
