Colors shown now.

What was the issue and what rectification action was done?

Date & Time : 13-07-2016 05:12:PM

Earlier Colors used same field fe_id to pick their designation while creating view in activity template. Since fe_id and tele_id were separated and different designations were picked with designation id as fe_designation and tele_designation they didn't match old checking done for listing.

Designations are now checked based on Fe or tele submitting the case for changing color, individually.
