Ganesh Sawant | Add new menu for showing reports for PAMAC operations

---

Hello team,

As per discussion with Sir Kailash, new menu is to be developed in web app to show operation logs as below :

- 1) How many reports excess
- 2) How many reports export
- 3) How many sent to client
- 4) How many FE login
- 5) How many case added

The report will show records count day wise.

**Process:**

- 1) New report Menu (**Action History Report**) will contain a form with From and To datetime, with validation for max 31 days date range and a dropdown to select type of report.
- 2) On click button export, excel file will be downloaded with day wise result.

Hello team,

New menu is created under **Super Admin** main menu as "**Action History Report**" in both India and Dubai server.

**Note :** Report shows total count day wise as per search in form.

Types of report:

-----

Case Created

Fe Submit

Send To Client

Export (After Send to Client)

Export Excel Report (Excel export templatewise)

Total MIS(Report) Searched

Total Mis(Report) Exported

Total Custom MIS(Report) Searched

Total Custom Mis(Report) Exported

Fe Login

Fe Logout

Hello team,

In addition to above post,

1) 2 reports Fe Login/Logout are ambiguous as the table **tbl\_mst\_fe\_log** is updated from webservice (Api\_live\_2\_3.php) using a method called saveFeLog() but we are not able to determine when the table is updated i.e when is the method saveFeLog() called from mobile app.

As such it is requested to PAMAC team to let us know if the method gets called during Fe Login and Fe Logout.

2) Some reports will show data only from the date ( 24-04-2023 ) when the new log table **tbl\_case\_action\_history** was added to capture the additional action as mentioned below:

Export (After Send to Client)

Export Excel Report (Excel export templatewise)

Total MIS(Report) Searched

Total Mis(Report) Exported

Total Custom MIS(Report) Searched

Total Custom Mis(Report) Exported

It just shows the count date wise which is not useful for us.

If you can give the elaborated report like date and time slot count of users, # of cases import, # of cases export etc then it may help certain level to understand the load on the server and explain the same to Ops for the slowness.

Hello team,

As discussed today with Sir Siddharth new report or menu to be created for below requirement:

Total Active Users

Total New Active User Added(This Month)

Total User Login This hour

and Graph per moth/per hour for login user

Mobile Login

Web Login

etc

Will discuss more before start any development.

Hi Manas

Please explain how the above development will help to resolve the issue of the slowness. Users are going to increase and report generation frequency will also increase in future.

All the above will give only the analysis data which will not work, we have already spilted the server - database and application to avoid the slowness issue.

We should focus on the SQL query optimisation rather than spending time in crease the MIS.

Hello sir,

Yes i have switched task to finding queries which need optimization, this is a report which we will work at a later point of time.
