Their is no case history added for saveData() and caseAck() functions in api_live_2_2_test.php.

As such no log file is created during Fe Accept/Reject, Verified cases. I will update the webservice for log files.

Please check with mobile app once done.

When the module was developed, the log for every stage of case process was saved including the change in fields. What is the issue now?

Kailash - Why the disconnect?
