point 4

---

point 4.

Change in web-service to send the size of data sending to mobile app.

will send one parameter length in bytes with each request.

this task depend on mobile app testing so time may increase if we shall not receive response on time.

some web-services are sending only single value like (status, 1, 0 etc.)

I think we don't need data length for such web-services?

We are sending data\_length parameter for only those web-services which are sending multiple information in JSON or XML format. Is this OK?

Kailash - What all requests are we considering here?

Sandeep - where all do we need data length from server?

Hello Kailash Sir,

At the start of optimizing application, created another web-service.

Web-service name is api\_live.php . I already informed to Rakhi and Bhavana about that functioning of Web-

service (api\_live.php).

I will provide documentation shortly related optimized web-service.

please provide answer related with data length.

we need each function name with parameter (you need data length or not).

Hello Sir,

In api\_live.php we create a function for response.

In that response added header like

```
header("Content-Type:application/json");  
header("HTTP/1.1 ".$status." ".$message);  
header("Content-length: $size");
```

The \$size assigned according to data Size,

From this way at mobile site get the length of data.

For each function detail's documentation will provide you shortly once its in stable state.

What should we need to do?

Need any change from our end?

**Posted By :** Sandeep Ghuge

**Date & Time :** 14-07-2016 03:38:PM

Yes please close. The required data length parameter is being received.

It would require web service changes for on field utilisation, these changes will be done by sandeep.
