Walnut API

As per concall we need below things from client and pamac

- 1) Is there any encryption used in API?
from pamac team
- 2) template id for which case will be added
- 3) design of import format (request)
- 4) design of export format (response)
- 5) status list of case which you want to share with client in API before case is closed

As per discussion with Jayant, he will prepare standard API documentation by end of tomorrow and upload here.
reply from client

As discussed on call, below are the API details where your team can start sending the lead status data.

Callback Details for UAT -

Endpoint - https://dev1.getwalnut.net/callback/loc/pamac/kyc_status <https://dev1.getwalnut.net/callback/loc/tu/kyc_status>

Method - POST

Data Type - application/json

Auth through headers -

'X-LOC-Key' : '00300042EC6642D998F8682A56A1EA43'

Awaiting similar API details from your end too so that we can start sending the lead data.

Is there any encryption used in API? from pamac team

No any encryption used by PAMAC

template id for which case will be added

Template # 710

design of import format (request)

Walnut ID, Customer name , Customer Address, Pincode, Customer contact No, Appointment Date, Appointment Time, Destination, Location, Loan Amount, Interest rate, KYC PDF Link

design of export format (response)

Status	Sub-status	Reamrk
Picked Up	Couriered *	* Courier Dispatch date, Courier POD No. & Courier Name to be filled
	Other reason	Remark as per Supervisor

Return To Client	Non Contactable	Remark as per Supervisor
	Lead Repeated	
	Non Servicable	
	Query	
	Not Interested	
	Other reason	

status list of case which you want to share with client in API before case is closed

Middle Stage

Tele Status	Tele Sub Status	Tele Remark
Pending	Appointment Fixed *	Remark As per telecaller
	Call back	
	Customer Reschedule *	
	Non Contactable	

* Appointment Date column to be filled

FE Status	FE Sub Status	FE Remark
Picked up	Submission Pending	Remark As per FE
Pending	Non Contactable	Remark As per FE
	Customer Reschedule *	
	Query	
	Not Interested	

* Appointment Date column to be filled

From Supervisor

Submission Status	Submission Status	Supervisor Remarks
Pending	Non Contactable	Remark as per Supervisor
	Appointment Fixed *	
	Call Back	
	Customer Reschedule *	
Picked Up	Submission Pending	Remark as per Supervisor

D202

Date & Time : 11-05-2019 11:18:AM

In Excel file we fetch all field name and its values to put in PHP test file. But there are few field name which have some issue like this-

- Available in Excel file but not available in Walnut STANDARD API.
- Available in STANDARD API but not in Excel File.
- Available in design request for import (**Loan Amount**) But available in Template.
- Is New Requirement field '**identifier_field**' will be in STANDARD API import field?

And I completed :

1. Put identifier_field in coding test file from excel file with data.
2. Change URL for live in that **case_import.php** file. which should to update data in live table.
3. Put all the field name and each data in array inside test file.

Inform me about those Points for further work.

Hello,

I have checked the master as per created by Jayant and also the excel sheet given by Mam Dipika.

The error message shown to Jayant as per discussion, was because Product id was missing in Standard API master for api name Walnut. Cases has been successfully imported for api now after adding the product "Credit Facility".

Please check and confirm.

Hello,

As per telephonic discussion with Mam Dipika, a file is prepared for the WALNUT api Case Import and Case Notification Response JSON format.

Please check and share this file with client, so that they can send PAMAC data and get response for the case in progress or completed.

Stanard API Case Import and Case Notification Format.txt

Hello mam,

I have tested the Client provided URL : https://dev1.getwalnut.net/callback/loc/pamac/kyc_status

used to send them case data as per standard api design for export, they have not responded to our data as such this error is showing. On successful receive client should return a response in json format as :

```
{'status': 'SUCCESS','errorCode':'NO_ERROR'}
```

or

```
{ 'status': 'FAILED','errorCode':'your_error_code_here','errorMessage':'your_error_msg_here'}
```

if not received. Log file for one of the case id is also attached, please check.

Date & Time : 28-05-2019 01:32:PM

Below is the response received from client

have looked at the log file and couldn't find the header authentication field. Please try passing following value in header:
'X-LOC-Key' : '00300042EC6642D998F8682A56A1EA'

Posted By : Bhavana Pachpande
D202
Date & Time : 28-05-2019 04:58:PM
Hello mam,

We have added the header and the response is received as ::

```
(  
    [success] => 1  
)
```

which is not what we are expecting. Please request client to send their response as ::

```
{'status': 'SUCCESS','errorCode':'NO_ERROR'}
```

or

```
{ 'status': 'FAILED','errorCode':'your_error_code_here','errorMessage':'your_error_msg_here'}
```

Date & Time : 10-10-2019 11:00:AM

Changes in Walnut:

1. in import module, multi import, and case, new case we will add a dropdown containing API Name

when importing any case user must select the API from dropdown so that the case belongs to that API

now that data can be used to be sent to the client using API

Option in the dropdown:

- a. Non-API (Default)
2. All API (Belong to that Activity)

NOTE: requirement by the client for sending case data through API for Excel Imported cases and Case added directly to the system without the API

2. Trigger Points for sending case data to the client

QUERIES : -

1. Is this Change is Dynamic or only for Walnut API Client? If Dynamic then it will take more time as we have to make changes in standard API master also if not Dynamic then we will fix this change in coding for only Walnut API id only
2. Please give us a field name whose value will be used for the trigger point also provide us all the values of that field.
Please provide us the URL which will be used for sending case data to the client to the client during this trigger point.
3. where the trigger points will occur
exam.
Supervisor edit and save the case
FE Submit the case
Tele Submit the case
the supervisor send to the client the case
supervisor holds the case
supervisor close the case
3. Please provide us JSON Formate in which we will send case data to the client

NOTE :

If change Will Be Dynamic Then More Queries Will be add.

Posted By : Bhavana Pachpande

D202

Date & Time : 10-10-2019 02:35:PM

At the time of dropdown development, there will be a validation, which could be done by using these two ways :

- a. The client in API master and client in import would be the same.
- b. Or I have to create an ajax function that will fetch the API name when the user will enter the client and activity.
