Case data update & attachment download

-
- 1) Would require separate model wherein editing / updating of existing value of cases (more than one case) already available in system. Value could be PDF/image or field value.
 - 2) Need PDF merge option wherein all PDF of the case should be merged into one pdf file and downloaded.
 - 3) Need "Download All" option wherein all images and PDF (attachments) can be download in one zip file.

Let us know the feasibility and timeline for the development.

- 1) Would require separate model wherein editing / updating of existing value of cases (more than one case) already available in system. Value could be PDF/image or field value.

Reply : Case Verification list already present for that.

In case verification list when editing any case in the edit form :

- 1) "**Download All**" button will appear, all images and PDF (attachments) can be download in one zip file if available for that case.
- 2) All PDF present in the case will be merged in one pdf file and downloaded.
- 3) Images won't be merged.

If following process is confirmed, it will take 3 days till demo server.

1) Would require separate model wherein editing / updating of existing value of cases (more than one case) already available in system. Value could be PDF/image or field value.

Reply : Case Verification list already present for that.

Requirement is for updating value of more than one case at a time simultaneously.

In case verification list when editing any case in the edit form :

1) “ **Download All** ” button will appear, all images and PDF (attachments) can be download in one zip file if available for that case.

2) All PDF present in the case will be merged in one pdf file and downloaded.

3) Images won't be merged.

If following process is confirmed, it will take 3 days till demo server.

- I need 2 separate buttons. Button 1 - Download all - this will download all attachments as individual files.

Button 2 - Merge & download all PDF - this will merge all pdf in one pdf and download this as a single file

How much time will this take?

As per discussion with Sir Kailash a Process text file is attached. Please check.

Also we cannot use one single form to open all the selected case id , as because the post size when saving the form will increase, it will not only take a lot of time,
but may also cause loss of data if the connection to server breaks or post max size of server exceeds, or script execution time is over. For security we have to divide the forms.

Query1 : We can give a alert when user switches to another form,
notifying user to check if form was saved. Is it required ?

Querie2 : Do you require a [Download all] and [Merge & download all PDF]
for all the selected cases at once ? Like overall download.

Here all the selected cases images and pdfs will be downloaded inside
case_id wise folder.

Ex: folder 1 say (10231313) will contain images and pdfs of case id 10231313,

folder 2 say (10231212) will contain images and pdfs of case id 10231212,

folder 3 etc as per selected cases.

This will be zipped under one folder and downloaded also.

Same overall download can be of [Merge & download all PDF].

Query1 : We can give a alert when user switches to another form,
notifying user to check if form was saved. Is it required ?

-We do not need case edit form to open for all cases that we want to edit. We want an option such that if i want to

update applicants_name for 10 cases, then with this option i shall upload an excel file with 10 case ids & 10 field values for applicants_name, on upload the field values for applicants_name for all these 10 cases will be updated in the database directly without the need to edit and save every case.

Querie2 : Do you require a [Download all] and [Merge & download all PDF] for all the selected cases at once ? Like overall download.

Here all the selected cases images and pdfs will be downloaded inside case_id wise folder.

- No. I need the 2 buttons on case edit form. Download will be for individual case only.

The attached process is not what we want.

1) We do not need case edit form to open for all cases that we want to edit. We want an option such that if i want to update applicants_name for 10 cases, then with this option i shall upload an excel file with 10 case ids & 10 field values for applicants_name, on upload the field values for applicants_name for all these 10 cases will be updated in the database directly without the need to edit and save every case.

Reply :

i) We can provide a button in Case Verification list as "Edit case import".

ii) On click of this button a new window will open. It will contain a browse button. **Note :** No "Sample Download" link will be present here.

iii) Create your own excel sheet, in the following format :

Case ID | Applicant's Name | Reference No

1021213| Rita | 4032

iv) Validations while importing the case field will be applied as such:

a) Foreach case id mentioned in the sheet it has to be present in the first column, always. Rest of the columns can be of other case fields.

b) Each case_id template will be checked to get the Field name as per the Field Label mentioned in the excel sheet. It will be case sensitive search. As such Field label mentioned in the excel sheet must match the same as present in the template.

If a match is found case_id for that "field value" will be updated otherwise, it will be ignored. No error message will be shown.

Example : If any case id mentioned in the excel sheet has template say (template 1) and another has (template 2). Also in the excel sheet there exists a column Mobile No, which is present in (template 1) but not in (template 2). Then the value even if entered for all the cases in the sheet will be skipped for case id's having (template 2).

c) Field value validation will be done if it is found in the template for that case id,

example : date field...

v) Images and pdfs cannot be updated in this process.

Query : Are there any specific field for which this module is to be made, or can it be any fields of the case table.
?

2) - No. I need the 2 buttons on case edit form. Download will be for individual case only.

Reply : ok

v) Images and pdfs cannot be updated in this process.

- will need this as well, one file to be uploaded in multiple cases. How can we do this?

Query : Are there any specific field for which this module is to be made, or can it be any fields of the case table.?

- It can be any fields.

Question: If i have mentioned 4 case IDs (in column A) as per the attached excel & Value of 'Applicants name' (is in column B) is to be updated in cases 1 & 2 and value of pincode (is in column C) is to be updated in cases 3 & 4, will this happen?

Reply : Yes for "cases 3 & 4" only pincode values will be updated "Application name" will be ignored and vice versa for "case 1 & 2".

v) Images and pdfs cannot be updated in this process.

- will need this as well, one file to be uploaded in multiple cases. How can we do this?

Reply : It is not possible to mention link in excel sheet to upload files, due to browser security. The php variable \$_FILES won't be able to get capture the file via the link only. It has to be uploaded using browse button. It will be a search topic will have to search if it is possible to upload files using excel sheet by mentioning the path only.

It has to be uploaded using browse button. It will be a search topic will have to search if it is possible to upload files using excel sheet by mentioning the path only .

For this, we can have one option to mention case ID & the field label for which the image is to be uploaded. And a browse button to upload one same image for all mentioned cases for the same field. I am talking about one same image to be uploaded for multiple cases

Reply : Yes, we can do that. We can add, two browse button one for uploading excel sheet and one for uploading image.

But the whichever image field will be mentioned in the sheet the image will be uploaded under that field for that case.
