Ganesh Sawant | Azure file backup

---

Hi Manas,

As discussed,

We request you to please share the create table query or the TBL\_Cases and TBL\_Case History details, to check the data which downloaded from the FTP. Please check and help us to get the quick connect with the team if in case of any issue

Hello sir,

As i have discussed with Mam Kavita, following are some **suggestions**:

- 1) Is the file zipped (.gzip,.zip) , then please use a software (like winrar) to unzip it first in order to access the .sql file inside.
- 2) If you want to view the data in your system, then you have to install mysql, there is a software package named WAMP which provides this. Then you can use phpmyadmin to access the UI and import the data or use another software like MySQL workbench to do so.
- 3) Table structure for tbl\_cases and tbl\_case\_history are attached below. Download and unzip file.

tables-cases-and-history-structure-only.zip
