Jayant will work on this from today.

Jayant, Please make one data type here (multiplefiles).

It will be text field in database.

If this type is selected then user can upload multiple files and store it in same field.

it will save file names in comma separated manner.

Show same all images in PDF also.

Web service will be created by pamac side.

- The datatype is created,
- file upload function created,
- Multiple files are moving to add function now.
- But now I have to rename those images and saved into the database
- After this only pdf work will remain.

I updated the multiple file upload in the template but still, there is an error to send those images in the database because there is some complicated functionality are used and my changes affecting previous functionality.

Still, I have to work on this to make it properly.

Hello,

As per discussion with mam Dipika please update here how long will it take to complete Multiple upload image for edit. Mention closer date.

It has been nearly 1 month , which is more than the time you have mentioned in task list which is 31/07/2019.

Hello Jayant,

Why has this task taken so long, according to your task list it should have been completed a long time ago.

Please state reason here with details we will cross check git repo also for your commits between this task and any other.

I asked Manas Sir about my error and they told " **If you are unable to solve this error then put it in my project that you are failed to complete this**". I tried to solve that today again.

Shaikh also worked with me in this error but we both fail on this.

So Manas Sir takes this error and complete this from your side now.
