Ajit Kedare | Revised VAPT for Web App

---

Hello sir,

As per checking the new vapt feedback pdf points we have prepared an excel sheet with our remarks. Also please set a time for discussion for revised vapt points.

As there are some new points also to discuss.

Hi,

With reference to our concall today, attaching VAPT detail ,  
have discussed separately with VAPT Vendor, he will confirm on the joint call with his team for further clarity,  
once timings shared will update the same here.

regards

ajit . K

Hello Sir,

As discussed for Revised VAPT Points please check the following and confirm the same:

**Point-4)** The application has a weak password policy

**Reply:** As per the link provided we will modify the following in our password policy, please confirm if it is acceptable for setting password:

- 1) minimum 8 characters and maximum 16 characters in length
- 2) Atleast 1 special,1 numeric,1 alphabet, 1 uppercase and 1 lowercase alphabet.
- 3) Password hashing method used is : md5() . **Let me know if this is ok ?**

**Note** : It will be difficult to change hashing method now as in table we have all employee data as md5 hash. If it is mandatory to change the hash method please let us know then will do so. But this will make all employee

login invalid for the first time and the password has to be reset by Some authorized user using Employee master

4) If password has space it will not be trimmed when user inputs it during login.

5) If user is de-active and not deleted will show message in login as : Your account has been de-activated.

But this will only work once current session is destroyed i.e user has logged out and tries to login again.

6) In change password will show a Password Policy note instead of an password strength meter. **Let me know if this is ok ?**

**Point-6)** Server version disclosure

Done

**Point-7)** HTTP OPTIONS method is enabled

Done

**Point-8)** Database connection string disclosed.

Changes are done as per the pdf shown in Case history module. Please check and confirm.

Hello sir,

As per reply to above queries from VAPT team following points are confirmed :

Point-1) Cross site scripting : We need this to be patched .

Point-4) The application has a weak password policy : We are ok with your points , implement server side mapping for it.

Point-8) Database connection string disclosed : We will re-test it.
