Client API for LTFS

Hello Team,

We received request from Client to send the case data on his server at the time of send to client .
Client share with us his Request body for sending data and response body for acknowledgment.

- 1) Can we modify our Standard api according to client request body
 - 2) If not then can we develop another module for it .
- Please check the attachment .

REST API for FI Response Capture.docx

Hello,

As per telephonic discussion following changes are noted in current Standard API. The changes are to reflect the excel sheet provided.

New fields to be added

- 1) **Additional headers** : : 2 input fields(Label a: Value) with add more section.

[Will be used to set additional headers when data is posted to client v.ia CURL during send to client process.]

[Validation : Not required]

Changes in current field and Label

1) **"For Export : Selected Fields"** (textarea) change to For Export : Selected Fields with JSON format *. Will add a note or placeholder as Example also if necessary.
Example :

```
{ "request_type": "FI", "application_id": "a3m0k0000001C9I",
  "applicants": [ {
    "applicant_id": "#ref_no#",
    "fi_address_tracable": "#is_traceable#",
    "fi_negative_area": "#submit_area#",
    "fi_stay_confirmation": " #confirmed#",
  } ] }
```

Note : Here user will add #field_name# which will be replaced with case table data when sending data to client. Also add " " (double inverted commas) before and after #field_name#. It will only replace #field_name# and not add "" inverted commas which is the required json format.

2) Json Response for Export (from Client) : Note will also change to

```
{
  "successMessage": null,
  "status": "SUCCESS",
  "httpStatusCode": "200",
  "errorMessage": null,
  "errorCode": "NO_ERROR",
  "case_id": "a3m0k0000001C9I"
}
```

Here case_id is compulsory. Without receiving case id from Client we won't be able to tell for which case the error is responded.

No change in receiving side i.e is Importing case from Client. It will be as per our format.

It will take 4 days for development and will upload on demo server on the 5th day. No other task will be taken during this development period otherwise development days will increase.
