(All Members) | Permission to delete some data from backend.

As discussed with Ganesh sir,

1) We are facing issue of slowness of loading Employee assign menu in super admin (India Server). There are nearly 3 lakhs of entries in employee assign. So as discussed with ganesh sir, need to delete records of employees who are not currently active. To improve loading speed of the page.

2) During RES restoration process there are many old templates which are still in use and contains unwanted fields. It takes too much time to delete them manually, need to delete those fields too from backend.

Kindly suggest any solution or give permission to do above process and also provide steps to do so.
