Ajit Kedare | DBS Client Query

Dear Sir,

Our client DBS have raised the below Queries with respect to DATA. Please help with the same

- How are we performing the archival of client data, what solution is been used for archival
- What is the periodicity / policy for archiving the data in our environment
- Is data encryption machanasim available in the archival solution that we are using

Please help with the understanding of above queries, as we need to revert client on priority.

Hello sir,

Please reply.

Also for archiving i think we are running the script manually as PAMAC needed old data also and script time out issue.

yes doing archive

Periodicity / policy is below(discussed) but no approval given by pamac

- 1) current server have only last 3 months data.
 - 2) Archive server have data of 6 month
- Then move data into Azure for archive

No encryption policy because data is moved from server to server and no manual work.

Following was my response sent through email on 21st May

Hello,

Following are our answers, be careful in what you submit, as this is your policy decision rather than your Technology decision.

- How are we performing the archival of client data, what solution is been used for archival

Client Data is stored for the first three months on the primary server.

After that, it is shifted to Azur Blob. I cold storage and stay there for permanent. This includes images and SQL.
(WARNING: Azur Blob storage is full, and data backup may not be successfully happening, we aren't sure we can help with any loss of data)

- What is the periodicity / policy for archiving the data in our environment

As said above

- Is data encryption machanasim available in the archival solution that we are using
NO, data is saved as is in the archive.

Hope that helps.

Hello,

thankyou for the revert , have reverted client accordingly
one query raised by client is.

is our offline data storage under bitly lock/encryption, this is standard feature for windows 10
