Template - Field Report

Hello mam,

As per email and discussion with Sir Kailash a report is prepared and a new functionality is added in Field Replace to generate a report of count of fields used in templates.

This will help us to check used fields and unused fields (reserved fields by system not used in template) and template names.

Also new fields are renamed in tbl_cases and Field Master as per email : co_applicant_2 and co_applicant_3

Please check and close.
