Country+Zone+Centre Issue

Country Master:

- 1) In Country Master search operation not working correct. If I enter “b” and click on search button it does not shows Bhutan
- 2) Add New country button currency will auto pull data and so we need to keep as non-editable.
- 3) Currency field is already pull data. So remove compulsory field label “ The Currency field is required”
- 4) Validation :
 - Select Country Name
 - Enter Country Code

Note:

- Country Code must be numeric
- ISD Code must be numeric

Region/ Zone:

- 1) Validation:
 - Select Country
 - Enter Region/Zone Name
 - Enter Address
- 2) Need “Pin code” add facility and it must be numeric
- 3) When we add new data it shows message “Cluster Added Successfully”. So change as “Region/Zone Added Successfully”
- 4) Even Edit Operation shows “Cluster Edited”. So change word “Region/Zone Edited Successfully”

5) Even Delete Operation shows "Cluster Edited". So change word "Region/Zone Edited Successfully"

Centre:

1) Add New Centre Validation:

- Select Country
- Select Region/Zone
- Enter Centre Name
- Enter Address
- Enter Pin Code

Regd,

Rahul
