(All Members) | Database Full Backup Live server

Hello sir,

Discussed for new backup policy with Sir Kailash and Prasad :

1) Backup should be taken at server end for entire database all 3 present in live India and Dubai server on daily basis.

2) If new backup is taken then older backup will be removed on backup success.

3) This is possible from server end as handling the large chunk of dump using php script will result in timeout. So we need to inform yrhost if they will be able to do so.

Please discuss with Sir Kailash on this and keep it on top priority , based on recent server activities , we have application code backup in bitbucket and local system but not database.

Hi Manas

THis threat was generated on the date on which the RES issue was arise i.e. 9th Dec 2022

Post that we have shifted on the AWS server from the Data centre, now the shapshot back is taken according to

information received however for the further backup process we are under discussion with team. Hence as of now this can be closed and new thread will be generated for the backup
