Hi bhavana

From various discussions internally i find that some of the cron jobs are probably not running in the AWS environment

e.g:

- cron_upload_cases.php - as i think the US server is not in use now.
- cron_cases_sync.php - i was under the impression that as on date, all cases are in live database AWS and none are moved to backup database. I thought that the Manual archive is the only thing that is being used today.

May be I am wrong.

But request you to once again check the list and confirm that the listed Cron jobs are actually running in AWS server Database / server.

Hello sir,

From various discussions internally i find that some of the cron jobs are probably not running in the AWS. environment

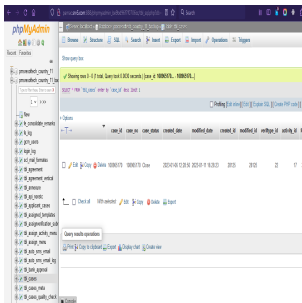

Reply: Yes, not all cron jobs are running as mentioned in doc file.

1) cron_upload_cases.php - It is used to remove case table related images from India based on condition (send to client and soft deleted cases older than 2 months - refer **doc**) and it is running currently. Since **backup US server**(different domain) for India is not present the script is not used there anymore.

2) cron_cases_sync.php - It is used for sync case table data from main database to archive database tbl_cases **500** cases at a time on each run.

It runs for India only and currently it is active.

Also it doesn't delete the case from main db after sync from main db to archive db. As checked today screenshot attached for last case sync in archive db in live AWS India server.

Hello team,

As per discussion with Sir Kailash cron job : cron_upload_cases.php is stopped from today.

Update cron job doc attached.

According to my review mentioned "cron_upload_cases.php" cron job removes images from live server.

Hello team,

As per discussion with SHIMBI team below is the new update cron job doc attached.

Also please check **D199** for sending_easyhr cron stopped as mentioned in doc.

Please let us know if the api is still functional - <https://pamac.easyhrworld.com/api/v2/Pamac/pmtUpdation>

As checked recently for cron job running date time we have found two cron jobs run at different time, screenshot attached.

- 1) image_compress_weekly.php
- 2) otherlogdelete.php

Please check the issue and can we know how did in run out of cron scheduled time ?

Hello sir,

Good morning, as per yesterday weekly meeting for active cron jobs in live aws India server, please check at your end from server.

Discussed with Sir Kailash, he doesn't have access to server details to check.

Hi

From the list of cron jobs I find that we have almost 11 cron jobs. For your easy reference here is the list that I have:

- | | |
|---|-------------------------|
| • demo delete.xml - delete xml files | - runs daily 2.00 am |
| • Backup database (ALL) | runs daily @1.30 am |
| • Live compress images 7 days at a time - | runs every Sunday 10 am |
| • Live sync Easy HR - | runs daily at 23 hrs |
| • Live delete records from tbl_fe_log - | runs daily 0.05 am |
| • Live sync case table in backup | runs daily 2.40 am |
| • Live delete google map log | runs daily 3 am |
| • Live delete thumbs folder | runs daily 1.00 am |
| • Renew lets encrypt certificate | runs daily at 0.10 am |

Request you to kindly let us know, as to how many of them are running as on date since I understand from Ganesh that some of these were requested to be stopped for some reason and in some when i went through the code found "die();" in the very second line indicating that the same does not run.

This information is required to restart some of the above with some minor changes as required in today's scenario.

ok sir,

From above cron job list 2 cron jobs are not our, maybe yrhost, please email them or discuss with Sir Siddharth or Kailash, rest as mentioned above i will also check the local code and update findings here -

- | | |
|----------------------------------|-----------------------|
| • Backup database (ALL) | runs daily @1.30 am |
| • Renew lets encrypt certificate | runs daily at 0.10 am |
