Hi,

Let me check and will post after analyzing the problem.

Hi,

After doing deeply analysis of code and functionality, it is found that the query contains UNION keyword so it could be the reason that the server is not allowing that query execution, since it is identifying as SQL injection

attack, need to discuss with Manas sir and Kailash sir regarding this..A link is shared for reference about UNION Sql injection

<http://www.sqlinjection.net/union/>

Hi,

Report showing proper on test site.

Please upload the changes on live site.

As after deeply testing and debugging both side front end and back end coding, it is found that it is issue related to html element field character limit as Productivity MIS query contains 2408 characters.

Changes Made

View file: admin/reports/preview

commented hidden element for sql query, added new textarea element for sql query with display as none, will inform after uploading on live server.

Hello,

Changes are updated in live server, please check.

**Note :**

Issue is resolved for now, but if in future query length increases then this issue might occur again so as per discussion with Sir Kailash and Khamroddin Shaikh, we will require 1 more day to add a fix to remove sql query submit in post when form is submitted. This new change will effect all mis as from now onwards only report creation id will be submitted in form and not the entire query. We will check the effects of this change first before uploading it in live server.

And please move this bug to change for changing the query submission process using form.
