(All Members) | Top 5 Heavy queries and use high memory consumption

Hello team

This thread will be used to discuss for optimization of application for recent issues related to script execution time out in aws server -

Topic -

- 1) To find total **Execution time** taken by script for the entire process.
- 2) To find **Memory** used for the script execution for the entire process.
- 3) Find out code and queries related to point 1) and 2) above and optimize them wherever possible.

Menus where operations are high and used on daily basis -

- 1) Import (with Dedupe Search)
- 2) Send to Client
- 3) Export
- 4) Multiple import
- 5) Case Verification List

Following can also be checked and make changes for above menus -

-> Optimize select * from to specific columns

-> Check select queries called multiple times

-> Check repetitive update or insert queries and try to execute in one update/insert query

Below are the findings from **Export** menu using Local sever (Wamp)

For 10 cases :

Start time : 1675236729.7407

Time end : 1675236748.4928

Execution time of script = 18.752110004425 sec

25112672 (in bytes) (25.112672 MB)

For 20 cases :

Start time : 1675237118.9108

Time end : 1675237297.3151

Execution time of script = 178.4042840004 sec

25514568 (in bytes)(25.514568 MB)

For 40 cases :

Start time : 1675243438.0822

Time end : 1675244018.6106

Execution time of script = 580.52834892273 sec (9.6754724820454995893 minutes)

26809328 (26.809328 MB)

Hi Bhavana

THis exercise was done as there was an issue of delay in exporting cases .

Which is closed as of now

Please close the threat
