Hi Navika,

Done with the basic functionality on local server.

But we have some technical issues related to store mutli selected values in another table, to avoid redundant record with same partial data which is not good for database structure.

It will take 1 day extra.

Can we continue it tomorrow?

Discussed(on call) technical issues with Navika.

Today we will try to finish these changes related to multiselect dropdown.

Basis the discussion, the technicalities should be decided by the technical team unless it affects front end UI or similar.

Data added properly.

On 'export' entire table has to be exported, all the entries to be exported at once. And on selecting and export, the data is not coming, just the headers are exported.

Reply : On export entire table is exported at once. Select and export functionality doesn't exist. It is only for multiple delete.

As per testing in Live site. Issue was found in delete.

When deleting any Case details entry, its data from main table were removed but that of sub-table were not. Thus causing redundancy of data in sub-tables. Sub-tables are used to store multiselect values : zone,center and sub-center.

I have updated the code in demo and live fixing this issue. Please check.
