Bhavana Pachpande | LTFS API

Hi Kailash,

As discussed with client yesterday , 1 Application can have multiple FI's related to that application (Office, Residential etc.). Please send 1 response against 1 Application ID (Include all FI's related to that that application is same response).

Please get the same completed at the earliest.

Hello Shaikh,

Please check this point and start development on urgent basis. Discuss if required.

Note : Currently we have same logic as in send to client for sending api cases to client that selected cases must of same ref. no . So when sending cases to client all the cases selected must have same ref. number otherwise grouping of data won't be possible when sending to client.

Grouping of multiple case data is done on the basis of Ref. no different Ref. no will generate multiple request to client with multiple payloads this will be new change if required.

For now we will send same ref. no cases only but will resolve the duplicate comma separated application_id issue.

Please confirm.

Hi,

Discussed with Kailash sir and Manas sir,

In client response need to test following condition and send response based on that conditions:

condition:

- 1) if same application_id for both vf type, then send only single application_id without any space or , symbols
- 2) if different application_id for different vf then send with ',' separated values
- 3) if one of the vf contains application_id then send only that application_id without any preceding/ appending ',' symbols.

will post once done, since it needs to import data of api cases on local.

According to your confirmation we asked client to send the sample case through the API wherein client shared below details PFB the request which we have sent from our side (Application Reference No a3m0k000002I7hpAAC): When we checked the pending it shows cases are inserted but refer # for both the cases is same whereas above payload shows different. Kindly check probably this is the reason when we push the complete details one verification type is getting push with reference # and another blank. "case_data": [{ "veriftype_id": "RV+BV", "telephone": "4456788999", "resph": "4456788999", "resi_pincode": "400093", "resi_city": "Mumbai", "resi_add1": "Fhsjsjd,Dhhdhdf,Dbdhhf,Mumbai,Maharashtra,400093", "ref_no": "0010k00000v9zCwAAI", "off_pincode": "400058", "off_city": "Mumbai", "off_add1": "hdvid,nxksn,Mumbai,Maharashtra,400058", "field112": "a3m0k000002I7hpAAC", "applicants_name": "Dhee Patnaik" }], "api_key": "9f8380e6f9512772cb8195f4414221aa" } When we checked in the test mail we have received two cases - RV and BV but its reference # is same.

Hello sir,

"When we checked the pending it shows cases are instered but refer # for both the cases is same whereas above payload shows different. Kindly "

Reply : Which above payload are we talking about here ?

Reference No and Application No are different , they are no the same. The json that we are sending to them has case id of same ref no, application no can be same or different it is send by client through api i think.

Please discuss with Sir Kailash for any further query.
