**Date & Time :** 06-09-2016 04:02:PM

Point No.61 -Standard API

1. New module to design standard API for particular client,activity,product and verification type.
2. Client,activity,product and verification type will be mandatory, product will not be mandatory.
3. Option to create import/export json string.
4. It will be the JSON format for receive requested data and send response data.
5. All details will save in database and create required directories.
6. Send to client will be done from current(send to client) menu(Same as Kotak API).
7. Encryption/Decryption type(mcrypt used in Kotak API) of import and export data will be fixed.

**Posted By :** Navika Desai

D129

**Date & Time :** 07-09-2016 11:12:AM

7. Encryption and decryption is mandatory? as many clients may not have this function

Also, where do we mention the specific users who will be able to do send to client for API cases (the restriction like we have in Kotak API).

**Posted By :** Rakhi Gaud

D129

**Date & Time :** 07-09-2016 05:07:PM

7. Encryption and decryption is mandatory? as many clients may not have this function
- Ok. We can provide an option for this in API design page. But we recommend encryption/decryption of data because it is more secure way of data transmission.

Also, where do we mention the specific users who will be able to do send to client for API cases (the restriction like we have in Kotak API).

- Also we can provide option for this in API design page. But it will take time.

**Posted By :** Navika Desai

D129

**Date & Time :** 07-09-2016 05:21:PM

7. What if the client does not have encryption decryption mechanism, then will one side encryption from our end work successfully?

- Also we can provide option for this in API design page. But it will take time.

How were we planning to do this earlier, if we had planned to replicate Kotak API?

**Posted By :** Kailash Kumawat

D129

**Date & Time :** 08-09-2016 08:48:AM

7. we can give option if client need encryption or not. but this task will take time.

We recommend to use encryption because without encryption data can be misused, stolen or hacked.

You have enforce client to use encryption for secure transaction of data.

Standard API were discussed and timeline given before kotak API development.

Please don't ask us Why, How, when as requirement understanding and analysis is a team work and you are also involved on it, so you are also responsible in any lack or delay.

**Posted By :** Navika Desai

D129

**Date & Time :** 08-09-2016 10:40:AM

But your response still does not answer my query that if client does not have encryption or decryption, then for using our API, they would mandatory need to implement encryption & decryption?

If timeline was given before Kotak, then lets work as per earlier thought process only, why modify it now and delay it further.

Let me know clearly - if we want standard API, the API with encryption or decryption will take more time or without it?

I asked how for a reason that if we replicate Kotak API and do not have option for username who will have authority for send to client, then after complete development, you only will say that it was not mentioned earlier and hence this will take additional time. And also, what is the point of API if the concerned person is not able to do send to client?

Where have i mentioned anything about lack or delay here?

**Posted By :** Kailash Kumawat

D129

**Date & Time :** 16-09-2016 12:23:PM

But your response still does not answer my query that if client does not have encryption or decryption, then for using our API, they would mandatory need to implement encryption & decryption?

reply : it will be optional, at the time of setup api for client admin will apply encryption if required.

If timeline was given before Kotak, then lets work as per earlier thought process only, why modify it now and delay it further.

reply : because it is good for security.

Let me know clearly - if we want standard API, the API with encryption or decryption will take more time or without it?

reply : obviously encryption will take time.

I asked how for a reason that if we replicate Kotak API and do not have option for username who will have authority for send to client, then after complete development, you only will say that it was not mentioned earlier

and hence this will take additional time. And also, what is the point of API if the concerned person is not able to do send to client?

reply : we shall provide module where all employee will be listed and admin will authorize who can do "send to client" through API.

**Posted By :** Navika Desai

D129

**Date & Time :** 16-09-2016 12:31:PM

Encryption is not required.

Standard APIs to be without encryption.

And module for admin authorising employee for send to client is okay for API.

Layouts were already confirmed, in case there are no changes to that basis the above discussions.

**Posted By :** Kailash Kumawat

D129

**Date & Time :** 20-09-2016 09:54:AM

ok. no question from our side now, if anything remain we discuss during development time.

**Posted By :** Navika Desai

D129

**Date & Time :** 20-09-2016 10:50:AM

Discussions have to be completed before development.

Please ask if any aspect is left as there cannot be any deviations while development.

**Posted By :** Kailash Kumawat

D129

**Date & Time :** 22-09-2016 09:43:AM

We can not predict if some issue arise during development, We try to cover maximum before start development.

**Posted By :** Navika Desai

D129

**Date & Time :** 27-09-2016 01:51:PM

Update?

**Posted By :** Kailash Kumawat

D129

**Date & Time :** 28-09-2016 10:42:AM

I think discussion is done.

If some issue arise during development we shall ask you.

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 13-12-2016 05:17:PM

Started development in local server.

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 23-12-2016 05:19:PM

For Import data :

Images file won't be considered while Importing data (i.e receiving data from client).

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 28-12-2016 04:55:PM

Master Side changes for Standard API are uploaded in country demo. Please check.

Login : SuperAdmin

Menu : Master > Standard API

Add new api for client and share api key for receiving data(Import).

Currently i am testing export functionality in local.

Export function will occur during Send to Client. Case fields data will be send to client according to the fields mentioned in Export in Standard API module.

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 03-01-2017 04:45:PM

Standard API files are updated in demo server and tested with the following:

1)Test in demo server using following URL for Import:

[http://country-pamac.urdemo.net/pamacapi/client\\_api/send\\_curl](http://country-pamac.urdemo.net/pamacapi/client_api/send_curl)

2) Follwing URL is used for Testing Export :

[http://country-pamac.urdemo.net/pamacapi/client\\_api/export\\_test](http://country-pamac.urdemo.net/pamacapi/client_api/export_test)

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 04-01-2017 05:06:PM

A excel sheet is prepared for Export and Import case data,

[Import] error code and

[Export] response code.

Error Code Standard API.xls

D129

**Date & Time :** 04-01-2017 05:31:PM

is the development completed?

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 05-01-2017 08:20:AM

Yes, files are updated in demo server too.

**Posted By :** Navika Desai

D129

**Date & Time :** 05-01-2017 04:00:PM

1) How do we design import template mentioned on API page?

2) Share sample fields for test import and export URL

3) While testing it shows at the end of page 'Fetching import template fields, please wait' it keeps rolling and does not move further. I saved, the page went blank.

4) What all details are to be shared with the client?

5) What changes are to be made from clients side to start using this?

6) API key is to be shared with the client?

7) In the layout shared there was a box for JSON string also, is that not required?

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 06-01-2017 09:21:AM

1) How do we design import template mentioned on API page?

Did not understand ?

If it is regarding the fields used for Import and Export, the fields are taken from Import Template as selected from the Import Template dropdown filtered according to client, activity, product and VT and Import Template table is same as used in Import Template Design module.

2) Share sample fields for test import and export URL

Reply :

Fields for Import and Export are copied from the table which appears after selecting Import Template Dropdown.

3) While testing it shows at the end of page 'Fetching import template fields, please wait' it keeps rolling and does not move further. I saved, the page went blank.

Reply:

A table for Import Template with field name will be fetched, these fields will be use for Import and Export. I have checked it on demo server table is fetched after loading completes Screen Shot attached.

4) What all details are to be shared with the client?

Reply :

No , following are to be shared.

a) Generated API Key for the application. This api key will be send by Client inorder to verify the client. Without this key or if the key doesn't match then on the client side they would get a response(send by Pamac) with an error code and message as per the excel sheet I have uploaded.

b) The json format for Importing data i.e the format in which client will send us case data and for what fields. Fields must match exactly (in number and name) as present in the Import fields for the Application.

This format can be found when "Sample Data" link is clicked in the api module. This is the format to be shared. Share the api key seperately. Client will have to add it in the json that they are going to send us as shown below.

Ex : **Import Json**

```
{
  "api_key": "eb01cb56e562c11489999c86c5b43a64",
  "case_data": {
    "field30": " ",
    "field28": " ",
    "field40": " ",
    "field29": " "
  }
}
```

c) The Source URL : where client will send us the case data:

[http://country-pamac.urdemo.net/pamacapi/client\\_api/checkdata](http://country-pamac.urdemo.net/pamacapi/client_api/checkdata)

d) Export Josn format i.e the json format in which pamac will send data to Client during Send to client operation.

Ex : **Export Json**

```
{
  "case_data":
```

```
{
  "field38" : " ",
  "field49" : " ",
  "field40" : " ",
  "fe_id" : " ",
  "field44" : " "
}
```

e) Export Url \* (Client URL for sending data)

\*\*\*\*\* This is to be taken from the client \*\*\*\*\*

The URL where client wants the data to be received during export (send to client).

f) Json Response for Exporting data : When client receives the data from Pamac side during send to client, they must acknowledge that the data is received or failed in the following format, with proper error code and message.

1 : {"response":{"ERR\_000":"success"}}

----> When successfully received export case data.

2 : {"response":{"ERR\_001":"Your error msg goes here....","ERR\_002":"Your error msg goes here...."}}

---> When any error occurs with the error message.

Note : Important !!!

Avoid following fields for Import/Export : **country\_id, client\_id, activity\_id, product\_id and veriftype\_id.**

These fields will be ignored. Wed cannot send or receive data on these fields.

5) .What changes are to be made from clients side to start using this?

A new webservice has to be created for sending , receiving data and with proper response when receiving data.

6) API key is to be shared with the client?

Yes, it is essential inorder to verify the client.

7)In the layout shared there was a box for JSON string also, is that not required?  
which box, is it the popup on clicking "Sample data."

D129

1) On selecting client and product, the assigned import template is not seen in drop down (screen attached)

D129

1) On selecting client and product, the assigned import template is not seen in drop down (screen attached)

Reply : New application has to be created, with same Export URL and a different api key, Client will send another Product or VT related using this api key. It will uniquely identified and save in case table.

D129

1) Import template is resolved, mistake at my end. Had selected wrong product

D129

Import and export JSON, API key created (attached). API name - Test - Capri Global - CPV - RL - RV

2) Where do we put the name of users who will be allowed to do send to client (push data to client software)?

API.docx

[Download](#)**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 12-01-2017 04:16:PM

1) What are next steps? How do i test further?

I have discussed with Rakhi about testing, i shall create a function to send and receive data. So that you can check the string. I will make changes and upload in demo server tomorrow.

2) Where do we put the name of users who will be allowed to do send to client (push data to client software)? During sent to client if case is of API, we have maintained a table to check if case is of API, cases selected for send to client will be checked in this table, if found it would refer the api table to get the export fields and send the Client export fields value to the URL , that they would provide us.  
This is the Export URL.

**Posted By :** Navika Desai

D129

**Date & Time :** 12-01-2017 04:53:PM

2) what i wanted to know is that we will have specific users that will be allowed to do send to client for the API cases, like we have for Kotak, where shall we put these?

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 13-01-2017 11:24:AM

2) what i wanted to know is that we will have specific users that will be allowed to do send to client for the API cases, like we have for Kotak, where shall we put these?

Reply : Does this mean that if any api is added, then export functionality will be specific to some clients only. There is no functionality for that. Export will occur for all clients during send to client for api cases.

**Posted By :** Navika Desai

D129

**Date & Time :** 13-01-2017 11:26:AM

Some confusion, lets discuss.

Will call at 12

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 13-01-2017 11:54:AM

I have created a function for Import :

URL : [http://country-pamac.urdemo.net/pamacapi/client\\_api/send\\_curl](http://country-pamac.urdemo.net/pamacapi/client_api/send_curl)

On hitting a new case entry will be seen in Case Verification tray of Supervisor.

Activity CPV:

API Key used : 8498b784be747077401177a4a501891f

Client data send :

a) "ref\_no"=>'41192',

b) "applicants\_name"=>"Capri Global",

c) "resi\_add1"=>'Pune',

d) "resi\_pincode"=>'411014',

These fields are same as mentioned in the API Name: "Test - Capri Global - CPV - RL - RV"

For Export : I have fixed a Case id from Send to Client List. : 102083870

Test URL :

[http://country-pamac.urdemo.net/pamacapi/client\\_api/export\\_test](http://country-pamac.urdemo.net/pamacapi/client_api/export_test)

**Posted By** : Navika Desai

D129

**Date & Time** : 13-01-2017 12:41:PM

Case 102083870 not removed from Send to client.

Also unable to do send to client for another case 102084166 received through API testing

Tried calling landline but unable to get through. Please call or shall alternate contact number

**Posted By** : Bhavana Pachpande

D129

**Date & Time** : 13-01-2017 01:49:PM

Case 102083870 won't get send to client using : Export URL

[http://country-pamac.urdemo.net/pamacapi/client\\_api/export\\_test](http://country-pamac.urdemo.net/pamacapi/client_api/export_test)

This is just for sending curl data to client there is no database change here. It is for testing the Export url and success msg.

Also unable to do send to client for another case 102084166 received through API testing

Same here , you cannot use the url to do so. You have to use send to client module. I have checked and it has been successfully sen to client.

During send to client the export url is called for api cases to send data to client. This url is given by client where they want to receive data. The Export URL that i have made is used for testing error message or success in case of any failure when we send our data to client.

**Posted By** : Navika Desai

D129

**Date & Time** : 13-01-2017 01:57:PM

there was no error or success message received as well.

**Posted By** : Bhavana Pachpande

D129

**Date & Time** : 13-01-2017 02:49:PM

We haven't print the message for success. It is kept as log file.

Attachment of log file is available below for both Send(Export) and Receive(Import)

If any error occurs while sending the data then error message will be printed as well as logged and operation will stop.

---

 received\_2017-01-13\_12.txt

 send\_2017-01-13\_13.txt

↓ Download

Log file for Export data

**Posted By :** Navika Desai

D129

**Date & Time :** 13-01-2017 05:22:PM

So this means that it has been tested successfully? Great.

Only thing pending is where to edit authrosied users for send to client. Will discuss on Monday. call me any time.

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 16-01-2017 03:15:PM

Additional Points as per Discussion with Rakhi :

1) Employee Multiselect for authorizing users for send to client.

Here, if any Employee is selected when creating the API, then when that employee logs in and has the right to Send to Client Menu. No checkbox will appear for any case of that api. Since his name is not selected while creating api.

Thus he won't be able to perform Send to Client(Export), as no checkbox will appear for that api case.

**Posted By :** Navika Desai

D129

**Date & Time :** 16-01-2017 03:23:PM

okay as discussed.

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 24-01-2017 08:51:AM

Currently I am working in this point.

Query :

Once say any api case has been "send to client" by authorized user. Case data has been exported to client. Now if the case is reopened for verification again, and authorized user performs send to client for that case again then, will case data be exported to Client once more.

**Posted By :** Navika Desai

D129

**Date & Time :** 25-01-2017 10:32:AM

Yes

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 25-01-2017 11:11:AM

Then it is ok. I have made changes for Multiselct Employee Assign for Export (Send to Client).

No checkbox will appear for an api case in the send to client List, if employee name is not selected while creating that api for which case is added. Same validation is applied during send to client functionality(internal coding).

Please check. Case id used for Send to client here is : 102084123 (Supervisor Login)

API used : Test - Capri Global - CPV - RL - RV

**Posted By :** Navika Desai

D129

**Date & Time :** 25-01-2017 12:06:PM

Do we have provision to add employees later? after the API has gone live

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 25-01-2017 01:26:PM

Do we have provision to add employees later? after the API has gone live.

Yes, we can edit the api and edit employee, but should not change or update any other field, if done so we must inform the same to client also, like api key, import/export fields , Export URL.

**Posted By :** Navika Desai

D129

**Date & Time :** 25-01-2017 05:36:PM

Okay.

Share where the employee must be edited/added.

**Posted By :** Bhavana Pachpande

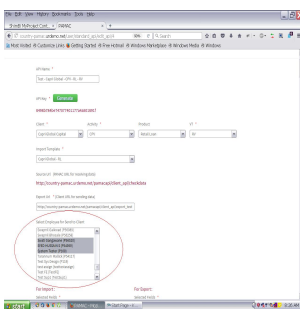

D129

**Date & Time :** 30-01-2017 08:27:AM

While adding or editing api a multiselect for Employee is added,

Label : Select Employee for Send to Client

Press control and select multiple employees. Screenshot Attached.

↓ Download

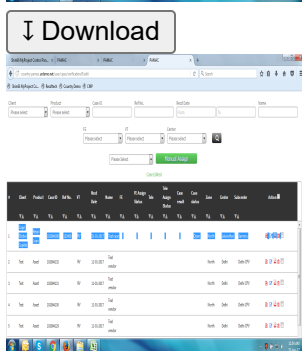

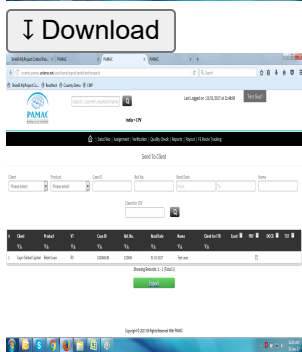

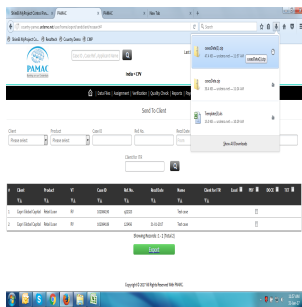

**Posted By :** Navika Desai

D129

**Date & Time :** 31-01-2017 12:01:PM

1) TestSup1 (pamac@123) does not have send to client right for Capri - CPV - Retail - RV, but send to client option shown (screen shot attached)

2) Cases once closed and opened again is shown in send to client. Screen shot attached. Case ID 102084189

↓ Download

**Posted By :** Bhavana Pachpande  
D129

**Date & Time :** 31-01-2017 04:03:PM

I have checked api case table these cases are not api cases. Only api cases checkbox will be removed.

Log file attached. Api cases will be entered when client sends data using our api key.

send\_2017-01-31\_11.txt

↓ Download

**Posted By :** Navika Desai  
D129

**Date & Time :** 31-01-2017 04:20:PM

Then i will not be able to test the functionality.

Please let, share the test cases and confirm on the module.

**Posted By :** Bhavana Pachpande  
D129

**Date & Time :** 31-01-2017 04:56:PM

As per discussion with Sir Kailash can we use (dot Net Developers) help in this for testing import and export data.

**Posted By :** Navika Desai  
D129

**Date & Time :** 31-01-2017 05:00:PM

Reason for this?

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 01-02-2017 08:59:AM

We need different domain to send and receive request. This test will be better than the test function we are using which receives data in the same domain.

Plus since the other side is using dot net , we are able to pass data between 2 different platform.

**Posted By :** Navika Desai

D129

**Date & Time :** 02-02-2017 11:55:AM

Let me know once the testing is done.

Document the testing process/details done and the result.

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 03-02-2017 05:02:PM

Please tell dot net developers to send json data via post to the following URL :

[http://country-pamac.urdemo.net/pamacapi/client\\_api/checkdata](http://country-pamac.urdemo.net/pamacapi/client_api/checkdata)

Json data used for Import to be sent by Dot net side

```
{
  "api_key" : "8498b784be747077401177a4a501891f",
  "case_data" :
  {
    "resi_pincode" : "411014",
    "resi_add1" : "Pune",
    "applicants_name" : "Capri Global Capital",
    "ref_no" : "31192 "
  }
}
```

=====

Export :

Please provide a URL for exporting case data to Dot net side.

When Send to client is used for authorized Supervisor, then export data will be send to the dot net side in the following json format via post

```
{
  "case_data" :
  {
    "applicants_name" : "Capri Global Capital",
    "supervisor_remarks" : "Done",
    "case_result" : "Positive",
    "ref_no" : "31192"
  }
}
```

If data is received successfully response from Dot Net side should be in the following json format via post.

```
{"response":{"ERR_000":"success"}}
```

If failed then response must be in the following format via post :

```
{"response":{"ERR_001":"Data Not received during send to client."}}
```

**Posted By :** Navika Desai

D129

**Date & Time :** 06-02-2017 10:40:AM

Where do i get dot net developers from ?

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 10-02-2017 10:34:AM

Import :

Post variable to send json string is : "send\_data"

**Posted By :** Navika Desai

D129

**Date & Time :** 10-02-2017 06:43:PM

You have checked at your end right?

I do not understand the reason for dot net testing from our end.

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 14-02-2017 05:01:PM

Ok, we have tested from our end.

We can now directly check this module with client.

**Posted By :** Navika Desai

D129

**Date & Time :** 14-02-2017 05:05:PM

Great. Thanks.

Please put this on live if there is no dependency.

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 20-02-2017 08:50:AM

OK, once point 18(QC) and 84(Re-Schedule) are closed i shall prepare files and put this point on live.

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 07-03-2017 11:25:AM

We can prepare files and upload in live server by tomorrow. Since it is a seperate module. Please confirm.

**Posted By :** Navika Desai

D129

**Date & Time :** 07-03-2017 05:17:PM

Yes, please go ahead.

Will this be closed by first half on live?

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 08-03-2017 08:31:AM

No it will take full day. Because i will prepare files today and then upload and test on live server.

**Posted By :** Navika Desai

D129

**Date & Time :** 08-03-2017 10:13:AM

pls go ahead.

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 08-03-2017 04:18:PM

I have uploaded this point on Live server.

Application Created for testing : Test - Capri Global - CPV - RL - RV

Api Key : **7772bb292acc423ab098a0a738585a7b**

Following case id was added via test function : 102805523 (API Case)  
using the api key as mentioned.

1) Case was successfully added to the system without any error.  
Log file for importing case data attached.

2) Case was successfully exported i.e from send to client.

Test URL used for exporting data :

[http://pms.resoftech.com/pamacapi/client\\_api/export\\_test](http://pms.resoftech.com/pamacapi/client_api/export_test)

Log file for exporting case data attached.

I checked the both text file I have only one query that created api can save or send multiple cases in one time using provided json format ?.

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 09-03-2017 08:21:AM

Reply : Save or Send one case at a time.

**Posted By :** Navika Desai

D129

**Date & Time :** 09-03-2017 10:01:AM

If the user has selected more than one case for sending or receiving, will that work?  
the system will automatically take one by one in queue?

or the user has to send or receive only one case at a time?

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 09-03-2017 10:12:AM

Client needs to send one case at a time.

While send to client for more then 1 api case , case data will be exported to Client one by one in queue.

**Posted By :** Navika Desai

D129

**Date & Time :** 09-03-2017 10:42:AM

So if the client is selecting multiple cases, then their API needs to be designed in such a way that the data should be sent in queue one by one right?

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 09-03-2017 01:51:PM

Yes.

**Posted By :** Navika Desai

Opened for new changes added to Standard api.

Both import and export for case data using api has changed as per new discussion.

Change Log 1.0

- 
- 1) In import now, multiple VT can be added separated by +.
  - 2) In export only one payload will be send for one api cases selected.
  - 3) In standard api master multiple VT is added, export fields is changed to be of json format with #templateId.field\_name# in the json array to be mentioned.
  - 4) Valdation to be added while sending data to client as Invalid selection for send case if parent case id of the case is not selected during sending process.
  - 5) New menu to be added for User side, so that User can send case data to client after send to client is done.
  - 6) ref\_no to be required in import field for standard api master.

**Posted By :** Bhavana Pachpande

D129

**Date & Time :** 29-10-2018 12:41:PM

As per discussion with Sir Sandeep,

A text file for the final output is created with a issue of replace field value according to same template id for multiple cases.

**Date & Time :** 20-11-2018 02:57:PM

As per telephonic discussion new changes added in standard api :

### Change Log 1.1

-----

1) Duplicate validation during case import from client :

If data send from client contains same value in case table for

**activity\_id** , **client\_id** , **ref\_no**, **veriftype\_id** , **applicants\_name** (if present in client data : optional) and **product\_id** (if present in client data : optional)

then duplicate error will be thrown .

Also the client data below the array won't get inserted in the case table even if it is valid. But the client data above the error portion will be inserted.

**Date & Time :** 29-11-2018 04:53:PM

As per telephonic discussion new changes added in standard api :

### Change Log 1.2

-----

1) O Auth 2.0 implemented in master and user side also.

2) In user side content-type : application/x-www-form-urlencoded is fixed for now for fetching api token during export cases. In future we have to add this in mater to make it dynamic also.

D129

**Date & Time :** 05-12-2018 05:45:PM

Hello Team,

As discuss with client now client wants multiple array with respect to Verification Type .

In current client

If RV then client need "fi\_address\_type" = "residence"

If BV then client need "fi\_address\_type" = "office".

We can do using combination of unique id but it will be specific.

For Dynamic purpose we need to add one flag is "Is Verification Type combined".

If enable then we can send the combine data of Verification Types in one object.

If disable then we send the multiple array of verification Type with respect to ref no.

Hello Team,

In Standard Api module we need following changes

- 1) In Export If value is not available then it should be show default value of respective field.
- 2) Image will share with link in Response body. Please add the flag for grouping of Images in Export . Export format data should be applicants[

```

(VT1) {
  "ref_no":"759834",
  (fixed)"file_array": [
    https://pms.resoftech.com/image\_path1">"https://pms.resoftech.com/image\_path1",
    https://pms.resoftech.com/image\_path2">"https://pms.resoftech.com/image\_path2",
    https://pms.resoftech.com/image\_path3">"https://pms.resoftech.com/image\_path3",
    https://pms.resoftech.com/image\_pathn">"https://pms.resoftech.com/image\_pathn"
  ]
},
(VT2){
  "ref_no":"759834",
  (fixed)"file_array": [
    https://pms.resoftech.com/image\_path1">"https://pms.resoftech.com/image\_path1",
    https://pms.resoftech.com/image\_path2">"https://pms.resoftech.com/image\_path2",
    https://pms.resoftech.com/image\_path3">"https://pms.resoftech.com/image\_path3",
    https://pms.resoftech.com/image\_pathn">"https://pms.resoftech.com/image\_pathn"
  ]
}
]

```

- 3) Please implement multiple #value# with respect to Key.

Please implement above changes As early as possible.

**Date & Time :** 06-02-2019 04:29:PM

As discuss ,

1) Those case are imported by Standard api module, that cases only show in "Send API cases" menu listing.

2) Same as above all are case shows in "API Response Notification" module.

**Posted By :** Khamroddin Shaikh

D129

**Date & Time :** 08-02-2019 04:11:PM

D129 Standard API Response Notification

-----Master side changes-----

1) create new table for additional header table 2

query to create api additional header table 2.

```
CREATE TABLE tbl_mst_api_additional_header2(
  api_header_id INT(11) NOT NULL AUTO_INCREMENT,
  main_api_id INT(11) NULL,
  header_name VARCHAR(100) NULL,
  header_value TEXT,
  PRIMARY KEY(api_header_id)
) ENGINE = INNODB;
```

2) constant file changes:

file:config/database

added constant TABLE\_API\_ADDITIONAL\_HEADER2 for new table

3)add additional header 2 value in database

A)controller:user/standard\_api

function:add\_api()

added header\_name2 and header\_value2 post value processing

B)model:api\_model

function:add()

added logic to add field values in TABLE\_API\_ADDITIONAL\_HEADER2

4) additional header 2 value in database when click on edit button

A)controller:user/standard\_api

function:edit\_api()

added header\_name2 and header\_value2 fetch and display data to view

B)model:api\_model

function:edit()

added statement to get field and values to display on edit page.

5)save additional header 2 value in database when click on save button

A)controller:user/standard\_api

function:edit\_api()

added header\_name2 and header\_value2 fetch and display data to view

B)model:api\_model

function:edit()

added logic to delete previous entries of field and values for api id and insert new one.

6) display additional header 2 fields

view:user/standard\_api/generate\_api

A)added changes for header\_field2 and header\_value2 elements to display according to add/edit operations

API Notification fields and example Field > refno : ref\_no

----- user side changes -----

queries:

CREATE TABLE tbl\_api\_nonstc

```
(
  api_nonstc_id          INT(11) NOT NULL auto_increment,
  api_nonstc_case_id     INT(11) NULL,
  api_nonstc_api_id      INT(11) NULL,
  api_nonstc_receive_datetime DATETIME NULL,
  api_nonstc_send_case_status INT NULL,
  PRIMARY KEY(api_nonstc_id )
)
```

engine = innodb;

1)config file:database

added constant TABLE\_API\_NON\_STC for tbl\_api\_nonstc table created for client response log

2)new controller:client\_response\_api (process client api request)

-function:checkdata()

To process the client response

-function:check\_default\_db()

to check database and process response fields validation

-function:connecttodb()

countrywise database connection

-function:api\_log()

keep log of client request in log file

-function:response()

to return response of a request

3)view:user/export\_api/api\_actwise

added 8 conditions for client\_response\_api url

added "/" before do\_order in ajaxorderby definition

4)view:user/export\_api/api\_actwise\_ajax

added "/" before do\_order in ajaxorderby definition

5)view:user/standard\_api/generate\_api

changed label API Notification fields and example for it.

## 6)Language

language:english/master\_lang

added 25 index and API Response Notification to page array

created activity template for the API Response notification with required list fields and select date of visit for request receive date

created sub menu for above list page

assigned submenu to the user only view permission

## 7)new controller:-api\_response\_notification

function:index()

to display list of client response requests

list ordered in datewise descending order

Steps from Admin side:

1) Create submenu API Response Notification with url pamacapi/api\_response\_notification/index

2) Assign submenu to supervisor with view permission

3) Create activity template with search fields and list fields, but select date of visit for request received date in list page

countrydemo:

commented http\_response\_code(422) in pamacapi/client\_response\_api as getting undefined function error

Hi,

Also Shaikh related changes for Client Response notification are uploaded.

**Posted By :** Sandeep Ghuge

D129

**Date & Time :** 20-02-2019 02:54:PM

Hi Bhavana,

For Client Response Notification working properly, But needs to add input parameters in the response also.

For example If client input is :

```
{
  "api_key": "4faaa39fa8e51efe35a412a039fed6df",
  "case_data": [
    {
      "application_no": "5893465",
      "transaction_no": "76857436584"
    }
  ]
}
```

```
]
}
```

Then output should be like that.

```
{
  "status": "117",
  "application_no": "5893465",
  "transaction_no": "76857436584",
  "message": " WIP."
}
```
