Date & Time : 25-04-2019 12:42:PM

Hello sir,

We can close the <http://testres.resoftech.com/> now as demo application is in sync with Live now.

Also i have completed and uploaded the task for connecting Live (readonly) Database functionality in demo application atoday.

We have tested it and now Shaikh/Jayant are using the demo application to resolve issues .

Note:-----

1) When connected to live server, it will be readonly only i.e only Select queries will execute, so don't use save button in any form.

2)We have also given option to allow only selected employees to access the LIVE readonly DB , only Superadmin has the rights always, rest users are on rights basis decided by Superadmin.

3) For api or webservice related, the connection to Live DB won't work, it is for Users side only. For api and webservice if required connection to live please change the conn param manually in the file. This will again be readonly.

4) Inorder to keep the Live and Demo application in sync we have to upload these changes in live application also , accept that it will be de-activated in live server. Otherwise again the demo application will be one step ahead of live application.

5) For any constants that are different for live and demo Example: GOOGLE API KEY, etc please add them in database.php file as this will be avoided in .gitignore and .gitftp upload.
Will update them manually in server.

Jayant and Shaikh please confirm on this.
