Compress images

As discussed with Kailash sir and Manas sir,
instead of cron job for image compression if we allow compression at the time of image upload then there will be no need to perform image compression cron job.
following modules will be be updated for image compression

- 1) Web Service
 - 2) Case verificatio edit
 - 3) Deleted images upload
 - 4) New case
 - 5) Case Entry
- Please confirm changes.

Hello Shaikh,

Please create logic in web service after saving image in server.

web service logic:

as discussed with sandeep sir, no log file will be created or any entry to log file will be added during web service file upload.

It will be good to compress image while upload on server. it can be done at app level or in web service.

There is no need to run cron job to compress images every day.

Files directly uploaded on demo today

1)api_live_2_3_test.php

changes:

controller:webservice/api_live_2_3_test

image compression on FE upload images

1)added unmas(0) to make_dir() as without it
there is error in folder permission setting 755 instead 777.

2)replaced str_replace() with realpath
causing error for destination location.

3)commented call convert_image_log()
For not to log for each file conversion.

changes uploaded on demo server,please test and reply
