Test cases for change in Export module

Here are 4 cases :

- 1) Cases having same export templates will be in same file(on separated lines).
- 2) Cases having same parent case and also having same export template then all in same file(on same line like RV+BV+PRV).
- 3) Cases having same parent case but having different export template then it will create different excel files because, templates will be different.
- 4) Cases having different export template then it will create different excel files.

Please confirm if ok.

Thanks,

Rakhi
