(All Members) | Dubai Field Visit- score model

As discussed in the call, kindly find below the score values to be embedded in the report against few fields.
Work on the report and share with us the report with score.

Check attached excel for **Fields and Score values:**

ADIB Field Visit- score model.xls

Hello Prasad,

Please post the findings as discussed yesterday for string to expression conversion of final score capture.

Date & Time : 01-03-2023 03:46:PM

Hello,

R and D and code to convert string to expression is done.
Further discussion to be done before development.

Regards,

Prasad Gawade

As discussed with manas below are some doubts need to be cleared before any development.

- 1) Additional Fields for storing the score to be showed in reports?
- 2) Will score be captured when Fe and Supervisor both submit the case?
- 3) Multiple Final score fields or only single final score to be given in template design?

Please check above doubts and before further development.

Hello manas,

For D265 will need demo server APK to test the changes.

APK build for demo server is ready but there is issue while downloading the template.

Need to check web services for the demo server.

D265

Date & Time : 15-03-2023 11:20:AM

Process flow:

Changes in template design -

- 1) Add new textbox for score option fields to get score of the options and field in which score to be store "Score Model Options" for
eg. field180|Yes::10|No::0

explanation -

field180 - field in which score to be stored i.e 10 or 0,

Yes::10 - Yes(name of option), 10 (points on Yes option)

- 2) A check box for final field (to check whether it is final field).

- 3) On click of checkbox mentioned above, a text area will open in which final field condition will be written.

for eg.

Field179, - field in which total score to be stored.

fail::<35, - final score conditions (if final score less than 35 score result will be fail)

pass::>=35|<60,

first class::>=60|<=75

Changes in case verification edit(supervisor side) and webservices (Field executive side changes).
From backend it will calculate total score and store it in final field.

Currently working on this task on local server.

D265

Date & Time : 15-03-2023 05:34:PM

Hello sir,

As discussed with Prasad in demo server we have webservice with VAPT points.

In order to add the logic for score capture on Fe submit, changes are done in webservice file also.

Now the **apk** build doesn't have VAPT point in it for demo server. So we will take the webservice of live server and put it in demo server and then add the new changes to it and test since the live webservice has no VAPT point added.

If test is successful we can start preparing files for live server.

Hi Prasad,

After saving final score conditions it disappears from the concern field.

And shows below value, please check

Right Conditions-

Field179,

Negative ::<35,

Refer to Bank:: >=35|<75,

Positive::>=75

Wrong conditions

Field179,

Negative ::<35>=35|<75>=75

Do you need this in web app or also in mobile app ?

Posted By : Prasad Gawade

Assigned To : (All Members)

D265

Date & Time : 21-03-2023 06:32:PM

Hello,

First and foremost this change will be applicable to both countries (India and Dubai).
and also there will be changes in mobile app web services along with web application.

As per latest findings and new changes to be done for D265 discussed with Sir manas.

Findings :

- 1) Found in **Dubai ADIB Covered card BV** template that there was mistake while putting score options fields. Screenshot attached(**err_template.png**).
- 2) Also there two final field in template design which should be only one to calculate final score value. Screenshot attached(**db.png**).

Changes need to be done to avoid and mitigate errors:

- 1) For optimization template id needs to be checked if it contains score options field before calling score option model in both web application and mobile web services.
- 2) Extra function to remove script tag from final score condition and allow only certain characters (i.e <, >, >=, <=, ::, comma) used in conditions.
- 3) Add explanation text for final field check box in template design (should only be fix type).
- 4) Add explanation text for score options textbox in template design.
- 5) When checkbox is checked for final score field then in view make final score field only label no hidden field.
- 6) Add explanation text for final field condition in template design.
- 7) Uncheck final score field checkbox when field type other than fix type is selected.
- 8) Link to check whether all score model related fields are proper or not and sample calculation function to test the model(currently we are not able to debug it properly in demo server).
- 9) Validation for score option fields allow only certain characters(|, ::).
- 10) Validation for final field only single final field allowed in one template.

The above changes will take 2 working days including testing.

Hello Prasad,

Please confirm if file preparation is done for live local copy and tested. Once done push.

If confirmation is received from Sir Siddharth to push will take action accordingly, since this task is escalated as per discussion with Sir Ganesh in last meeting.

Date & Time : 24-03-2023 02:27:PM

Hello sir,

After review following points are found, please let us know if we can go live without these points:

- 1) Point no. 8 part2 - Sample calculation development is pending(will work after put on live).
- 2) Final score field in template design should not be given for FE. (Development pending to remove editable to FE when final score field checkbox is checked).
- 3) Hide all field type options when final score fields checkbox ticked, make it similar when field type is fixed (Development is pending).
- 4) In web form when score options are changed then the final field score value does not change. It changes only after saving the form. Do we need this on change event or after save web form ?
- 5) Reports to show final score field captured values i.e score is not done, when required please let us know.

Date & Time : 24-03-2023 02:36:PM

Hi ajit

The points raised by Prasad are valid but we can still go ahead as these are not show stoppers and as these have to be managed in Template design only. For the time being Dipika can build the Template a little more carefully.

These should be attended on priority basis and tested by Prasad in a few days.

I approve the movement of the code etc., to production as required due to the urgency at dubai.

We are taking the necessary steps to ensure a successful release by carefully considering the 5 points raised by Prasad before pushing the updates to live. We also value the approval of Mr. Ramakrishnan and the single pair review of code and suggestions by Manas. However, we want to be cautious and acknowledge that we have not tested the development ourselves nor have we obtained sufficient test results or data at this time.

Manas go ahead

Hello maam,

As discussed,

4) In web form when score options are changed then the final field score value does not change. It changes only after saving the form. Do we need this on change event or after save web form ? - Yes

5) Reports to show final score field captured values i.e score is not done, when required please let us know. - Don't need for this functionality for now.

Please confirm on above points.

As discussed with manas today,

Pending points in score model.

1) a) Sample function to calculate total score for score model fields template(already started working need enhancement). b) On search, view score model button disappears need to work on it.

To be discuss with Dipika maam and Ganesh sir.

2) Query : Do we need also radio button for score model option fields(currently we are using select field type) ?.

3) In case verification edit calculate total score on change event of score option fields.

4) Dont allow ":" and "|" character in option fields when score option fields are not as both are used by system to calculate score.

5) Optimize query in web app and mobile web services i.e remove unwanted db queries if not necessary.

The above points will require 3 working days to be implemented on local server.

Hello as discuss with manas in evening call,

Following are the list of pending and points to be put on hold task.

Pending points (partially completed and need to be completed fully)

- 1) Sample field score table to be shown on admin side.
- 2) View score model fields button not visible when we click on search button(not working properly).
- 3) Optimization for score model field calculation in both web app and in mobile app web services.
(Remove unwanted queries which are not necessary).
- 4) Validation option for option field (don't allow ":", "|") as they are used in score option fields.

Points on hold

- 1) Query : Do we need also radio button for score model option fields(currently we are using select field type) ?.
- 2) In case verification edit calculate total score on change event of score option fields.

OR

Calculate function to be use in admin side ?

Will require 2 working days till demo server.
