Hi,

in coding checked there is product_id field to map to product name and there is new change for client name,

Changes (For developer):

Mapping field

product_id or product
client_id or name_of_client

PDF Field

product_name
client_name

changes uploaded on countrydemo please check

B395 to C95 Product id and client id not showing

-As checked in product id showing product name in pdf export

-Regarding client id to client name it is new change

Hence changes done for client id(**For Developer**)

controlle:user/downloadreport

function:downloadpdf(0

added:client id to client name mapping

(For Tester)

Please check changes uploaded on live server and close if successfully implemented.

Hi,

We are trying to replace field through Field replace module.

While replacing fields system shows " Fields replaced successfully" but the changes not reflects in template design.

Template Name- Template Name- Finance Housing_FRMU

In case verification edit Client name not reflecting but the same is reflecting pdf.

Case ID- 102017096

Hi,

For reference:

problem: all below queries run in one transaction so it could be that one of query failing hence it changes are not reflected and rolled back. need to check.

queries used for field replace name_of_client to client_id for Template Name- Finance Housing_FRMU

//Update destination field value with source field value in cases table.

UPDATE tbl_cases SET client_id = name_of_client where template_id = 443

//Make source field value NULL(blank).

UPDATE tbl_cases SET name_of_client = NULL where template_id = 443

//Search and replace destination field with source field in import templates if found.

UPDATE tbl_template_details SET field_no = 2, field_name = "client_id" where main_template_id = 443 AND field_no = 628

//Search and replace destination field with source field in export templates if found.

UPDATE tbl_template_export_details SET field_no = 2, field_name = "client_id" where main_template_id = 443 AND field_no = 628

//Main format pdf query:

UPDATE `tbl_mst_pdfexportdesign` SET `pdfexportdesign_format` = 'format with Client Name #client_id#
and so on -----' WHERE `pdfexportdesign_id` = '291'

//Search and replace destination field with source field in global template meta table.

UPDATE `tbl_template_global_meta` SET `case_meta_id` = '2', `field_name` = 'client_id' WHERE
`case_meta_id` = '628' AND `global_template_id` = '443'

Hi,

there was issue in field value transfer

client id field designed to set only integer and name of client field have values in text hence
converted value to int and transferred

changes uploaded on live please check and close if implemented properly.
