Megha Gavankar | VAPT web and mobile app mitigatin

Hi,

VAPT for web and mobile app conducted, please find attached observations , also sharing the VAPT report for reference.

we need to mitigate the observations and confirm the vendor for post mitigation testing

please help closing the same

password for the attachment will be shared seperatly.

Hello sir,

For vapt point 1 : Sensitive Data Exposed ; the info.php file is removed from demo India aws server.

It is not present in live server. Screenshot attached.

Hello sir,

Excel sheet for new 2023 VAPT points are updated, please check.

Each task will be worked on, in the order as mentioned in the excel.

Note: For **mobile app VAPT** points please discuss with Android developer and let us know if any more new changes are to be done in webservice. Old Mobile app VAPT points are present in demo server only and not live server for both India and Dubai.

Refer discussion: **D222**

Hello sir,

Few more updates are added for VAPT web application, please check excel for updated Shimbi remarks.

For point 2 - The server supports weak SSL/TLS ciphers and weak TLS version.

Below is the response from yrhost, email is also forwarded :

"2. The server supports weak SSL/TLS ciphers and weak TLS version." in pdf file.

We can remove old TLS versions and ciphers but that would mean old windows OS, old android versions and old browser will no longer be able to load webpage under https.

Please confirm and we can remove it. Also note it is marked as "LOW" risk under pdf.

Hello mam,

VAPT web app, Point 3 and Point 6 changes are updated in demo server for both India and Dubai, please check if any issue in login for any users as changes are present in login.

Note:

- 1) Check bank login URL also.
- 2) RSA public/private key pair with passphrase is used for **password** encryption and decryption during the process of login form submission and verification.

Date & Time : 18-07-2023 05:13:PM

Hello sir,

For VAPT point 5, simultaneous login there are 2 options, please let us know which to implement :

1) The last time user logged in will be treated as a valid login and if same user was logged in previously in any web app device will be logged out after 5 min. For this a server request will be send every 5 min for every user logged in or we can logout the previous user if he does any action like click on menu or button.

2) The first time use logged in will be treated as a valid login and if the same user tries to login in next time in any web app device then it won't allow it.

Note point 2 Drawback: Unless the user logged in first time, logs out next login won't happen. Also in case user closes the browser or system i.e session lost without click on logout menu then the user can never login next time.

He has to inform Res to request for new login or we can set an fixed hour for next login.

Hello mam,

Below is the password policy used in web app:

- 1) minimum password character length is **8**
- 2) maximum password character length is **16**
- 3) Must not match last password
- 4) Allow alpha numeric special characters as below rule (regular expression shared):

- a) ATLEAST_ONE_NUMBER - `"/^[A-Za-z]*$/"`
- b) ATLEAST_ONE_CHAR - `"/^[0-9]*$/"`
- c) ATLEAST_ONE_UPPERCASE_CHAR - `"/[A-Z]/"`
- d) ATLEAST_ONE_LOWERCASE_CHAR - `"/[a-z]/"`
- e) ATLEAST_ONE_SPECIAL_CHAR - `"#[~`!@#$%^&*()_-=+{}[]|:;<>.,\"s?\\]+#"`
