Date format in report.

---

In reports, found that after exporting excel it shows date in 2 different formats, it is default changed from excel. So, now we have changed format for date only in reports like for example '12-Dec-2014' and it will show in excel like '12-Dec-14'.

Thanks,

Rakhi

It is only for reports. We did this because in excel sheet it showing date in 2 different formats and it is default. In other all views date format is 'dd-mm-yyyy'.

We can change this format in all fields and views but it will take time.

Thanks,

Rakhi

Refer to the attached screen shot and test import file.

For client GE SBI, for only one date format in the import file, the system is taking two different formats.

Please help.

 GE SBI Import test.xls

Let me correct my points:

on TAT list page, Import case list page and in import excel sheet we have fixed the date format i.e. 'dd/mm/yyyy'.

And for above issue please refer attached screenshots.

1) In template GE SBI BV(Salaried) :

'Received Date' field given as field type 'inputbox', where it should be of field type 'Date', thats why at the time of import it considered it as text and saved data as it is like in format 'dd/mm/yyyy'.

In other verification templates it is right.

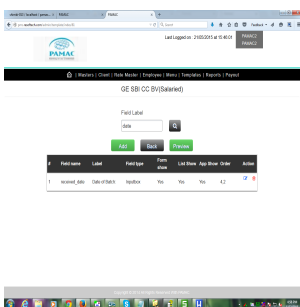

2) In global template GE SBI CC Global :

'Received date' was given as field type 'inputbox', thats why it showing date as it is from database without converting it into proper date format.

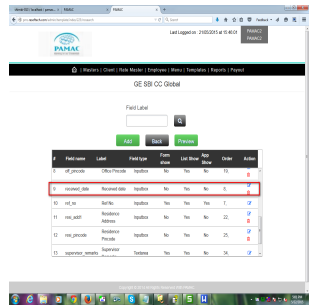

Now I have changed the field type of 'Received date' only in Global template(GE SBI CC Global), It showing date in proper format only excepting date of case of verification type BV(Salaried) because it was saved in wrong format.

Thanks,

Rakhi
