Dipika Yedge | Move images/pdf on clod storage after STC | Low

Hi,

Currently all the Document Verification Softcopy getting pass on to FE on Whatsapp for the verification which is an issue, we wants to check whether we can upload the softcopies in the RES and same can be visible to FE for the verification. Post verification and case marked send to client image can move to cold storage.

My understanding of the requirement is given below.

- As on date Verification soft copy is given to FE by Whatsapp. However there is a provision (through the template) for giving documents to FE through the application by supervisor (case verification).
- Once these documents are uploaded they can be viewed by FE
- Currently once the case is closed or 'Sent to client', all the images, documents etc., are retained in the Live server and transferred to cold storage for a period of 6 months from the date of 'Sent to client' through a cron job
- Now the change required is
 - The images /documents loaded by Supervisor should have a separate file suffix to indicate that these are loaded by Supervisor
 - Based on this suffix on the day or next day of 'Send to client' these should be moved to cold storage for better management of space in the live server.
- Please verify the above and let me know whether my understanding is correct. Then we can work out on the technical approach paper on the same.

Hi dipika

This subject matter is no more relevant as all the images are daily transferred to our wadala server/system and the images are deleted from the Main server periodically as per policy.
