New module to update rates in case.

---

Hi,

we are proposing solution for issue of updating client rate and employee rate.

Process will be as follow:

Create a module for supervisor/admin,

1. list page with search filters-

- List page will contain all search filters like country,zone,center,subcenter,client,activity,product,verification type, FE, create date range and pincode.

- Records will not be visible until user do search. And result will show all type of cases like open,close,reopen etc.

- At the bottom side in list page two input boxes will be there for client rate and employee rate.And a save button.

For more filtration we can provide checkbox for each case record.

Please post your suggestions on this.

Is this module for manually updating rates for all cases?

If yes, then this is incorrect.

We need to update the logic of rate calculation once and the system should automatically capture the rate of cases.

If no, then please elaborate, I am unable to understand the proposed module.

Then that process is incorrect.

We need to update the logic of rate calculation once and the system should automatically capture the rate of cases.

Please close.

This is not to be done as it is not correct.
