Request Images (cold storage)

As per discussion with Sir Kailash new module is to be added for Super Admin inorder to request case images.

a) I text area field will be given in this module where Super Admin will enter case ids with comma seperated and click on Request images button.

b) It will fetch all the images related to the cases and email them to Sir Kailash. Plus a log file and a log table will also be created for the made request.

This will be for both countries (11,12).

c) The requested images send via email will be then used to raise token for cold storage Admin to restore images from cold storage.

Please confirm before development starts. It will take 2 days for development till demo server.

This is for archive case images only.

But this module will be for cases present in tbl_cases.
As per request of images posted in B297.
Mail for image request will be directly send to sir Kailash for cold storage restore. We don't have to modify script everytime then.

This module is not required.

Reasons:
1) The images requested in B297 are because of the mistake of moving / deleting live cases. If we do not repeat that mistake then why do we need this?

This module is required because developer will not spend their time in operational support.
Administrator can delete images be herself.
We are creating one module for requesting case images also which will automatically retrieve images from cold storage and store in pms application without developer intervention.
For these, we are studying google APIs for cold storage.

Okay if you insist.

But this task can be taken up only after the existing tasks and earlier tasks are completed.
