Field validations to be applied while import

This is very urgent, please share the time required for this.

1) The validation of fields that have been set in the template design should be applicable to the import module if the field is used in import template.
For eg: If a pincode is mandatory for a template, min & max length is 6 numeric digits and the import file has the field for pincode, then the pincode cannot be blank in the import file and has to be numeric 6 digits only.

2) A 'select' type field is used in import template, then the value of the field in the import file will have to be one of the option values only.
For eg: If for a field1 options are Rented,Owned and the import file has that field1 in import template, then the value of field1 in import template has to be either Rented or Owned.

If either or both of the above conditions are not met, then the import module show show an error specifying the incorrect value.

Please let me know if there can be any possible errors that we may face by implementing this.

Hi,

I had mentioned this is urgent, still i have not received a revert on this.

Please update

Hi Navika,

Uploaded the changes related to this on demo site.
Please verify it and let us know if any validation is not working.

This is tested ok on demo site.

Please do not upload it on live now, will let you know when this is to be done.
