(All Members) | Essential software updates

---

Dear Ganesh

IMPORTANT COMMUNICATION.
Please make a note and let us know your opinion.

As the application is now too old and is on legacy software, it's time to look at essential updates. In this email, I will discuss the crucial upgrades for the PAMAC application.

**For Web Application**
PHP - Must update to 7.3 or more
MySQL - Initial 5.7 and then jump to 8
CodeIgniter - 3.1.11 (This is up to date)
*Two years from now, we can go to CI 4 +*

**Mobile Application**
We are not aware but must take a critical look and should upgrade to the latest Android version.

**On the Server-side**
Currently up to date later in the year 2022 to CentOS 8

**Backup**
There is no clear and consistent backup policy.
You must take a hard look at it and fix this.

**Azure backup (80% full)**

Total objects: 4675690
Total size: 782.773 GBytes (840496473070 Bytes)
**MUST WORK QUICKLY on this, either update or remove very old data.**

**No Backup for Dubai Server**

**Finally, in the long term separating Dubai and India application version is best.**

These are essential updates and should be done sooner than later.
It will take one month's efforts without even one singly day distraction (Except emergency bugs, but no new development).

Please let me know your thoughts.

Regards,
Siddharth

Hi siddarth ji

**Mobile application:**
We are expecting a new Android resource this week, and once he joins we will look into first on existing bugs or issues which have been left along (even though web app side has been completed.  Later may be in a week or two the upgrade to Android should start.

**Backup:  India**
We have contacted ACRONIS representative (the person who have given the quote to you).  We discussed the whole process, and have requested them to give a trial (which they readily agreed for 7 days).  We are waiting for their mail in this regard.  As soon as the same is tested and successful, we would buy/rent the same from them.

**No Backup for Dubai Server** This is a very serious issue.  Shall discuss immediately on the same with our team.
Meanwhile, please let me know what would be the best option here.  Should we go for Acronis or some other mode as the Dubai server is under a vendor "Courier".   Your suggestion would help us in deciding the process.  Qns like can the backup be in India or should it be in Dubai only or some of the other questions which i need to understand.
