Hello,

As per our phone discussion , i will prepare a sample function to check if the image could be read from local server using the path mentioned in the excel sheet and then upload on server.

These would take 1 day check with the test script.

Query 1) : Will this be a part of current Import module or a new module will be created ?

Query 2) : Will this be a part of multi import also ?

Hello,

I have created a script in local server for image upload using excel sheet.
It worked.
But when i ran the same script in country demo server it did not work. It was unable to read and upload the file from local machine using the path mentioned in the sheet.

You can check with import module in Demo server for :
Axis Bank > CC >Axis Bank CC RV_BV_RT_BT. Template is attached.

🅇 Template.xls

As per script given by Sir Kailash: javascript code to capture image path from local and upload in server, is also not working.
Javascript function is unable to read image directly from mentioned path.
(Example : E:/upload_image/test_image1.jpg).
The script works when we click on browse button and select the image.
