Dedpe function

Hi,

For dedupe checking, can we have options as below:

1) Mobile number / telephone number to check only last 8 digits instead of the entire field value
2) Whether the system can determine the percentage of matching words (words separated by 'space') and decide accordingly if the case is dedupe or not. Example while comparing 2 address fields, if 65% of the words of the address match then the case to be reflected as duplicate.

Hi,

Please find following comments on above points :
1) Mobile number / telephone number to check only last 8 digits instead of the entire field value
- we can do this change but it(phone no related fields) will be fixed in coding.

2) Whether the system can determine the percentage of matching words (words separated by 'space') and decide accordingly if the case is dedupe or not. Example while comparing 2 address fields, if 65% of the words of the address match then the case to be reflected as duplicate.
- We can do this change but it will take time because we need to develope logic for this type of search.

Hi Navika,
Can we close this discussion? or we need it in future.

This point is added in Task list and not set priority yet.
Please refer D94.
