Hello Prasad,

As discussed with Sir Kailash for **tbl_mst_fe_log**, we need to know when it is updated from mobile app.

There is a method called saveFeLog() in Api_live_2_3.php where this table is used. As searched the method saveFeLog() is not called anywhere in our code directly, so please check and let us know when it is called from mobile app.

Note: Table record added trigger points as per Sir Kailash queries-

1) **tbl_summary_comments_log** : It is used for data insert during Send to Client if Sumamry page is present to add summary page form data.

2) **fe_consolidate_remarks** : It is called during Fe Case Submit in webservice for DCR_Appt Activity and India server only.

3) **fe_log** : It is called during Fe login from mobile app, to store login related details.

4) **tbl_assigned_templates**: It is used to hide/show checkbox in Send to Client/Export/Send Api Case to Client menu list page. And found multiple methods in code where table is inserted/updated, usually when case edit and save.
