Standard API documentation for API

Email from client about todays concall
Hi Ganesh, Kailash,

Thank you for the con-call today.
Would be really grateful if you could share the API documentation as well
as sandbox access with us.
Do let me know if you require any other information from our side.

Regards,
Siddharth

Is There any encryption during data transfer from client side?

Jayant will update standard api here with sample script.

Date & Time : 25-04-2019 04:33:PM

- I created that file and filled intro about STANDARD API.
- I used Screenshot for each and every field.
- point out each and every error in the document.
- Complete Process for **API Response Notification.**

- And Complete process using Example with proper Screenshot is on working.

```
Still, I am working on finding the process to note down in the document and I will put that
document file as I complete this last step of Example.
```

Hi Kailash

There may or may not be encryption. Siddharth has asked for the API documentation hence please share the same with current process of without encryption. If required we will add the encryption later.

Date & Time : 07-05-2019 03:00:PM
As discussed with Kailash actually we had asked to share the documentation for the normal address verification and document collection.

Now we will share the document with client and update you once the response received.

Hello sir,

As per discussion with sir Kailash, we have created 2 files for testing : Import and Client Notification.

1) Case_import.php   [Contains the code in which Client will send PAMAC data]
2) Case_notification.php [Contains the code in which Client will request for Case status they have send to PAMAC]

Please find the attached zip file and you can share them with client also for their reference.

Note : 1) The URL used in this 2 files is of Demo server (https://country-pamac.urdemo.net). So please check there if the case are added and processed.

2) Also when you test please change the ref_no and applicant_name present in the code,

so that duplicate case error message is avoided.

Use PostMan App for testing
Data must be in JSON and POST format (see screenshot)

URL
https://country-pamac.urdemo.net/pamacapi/client_api/checkdata

Key
send_data

Value
{"api_key":"8498b784be747077401177a4a501891f","case_data":[
{"veriftype_id":"BV+RV","resi_pincode":"411014","applicants_name":"PAMAC Api Test1","ref_no":"99811",
"off_pincode":"411014","off_add1":"Vimananagar, Pune","resi_add1":"Kharadi"}
]
}

------field description------------
api_key : mandatory, fixed, provided by PAMAC
case_data : array of cases, at least one case information is mandatory
veriftype_id : mandatory, fixed, provided by pamac, It is a verification type (RV: Residence Verification, BV:Business Verification). example : RV, BV, RV+BV all three format are correct
if you want only Residence Verification then put RV.
if you want only Business Verification then put BV.
if you want only both Verification then put RV+BV .
resi_pincode : resident pincode, optional

applicants_name: applicant's name, mandatory
ref_no: application number(unique number from clients side for future communication)
off_pincode: office pincode, optional
off_add1: office address, optional
resi_add1: residence address, optional

----

for PostMan App for testing
Data must be in JSON and POST format (see screenshot)

URL
https://country-pamac.urdemo.net/pamacapi/client_response_api/checkdata
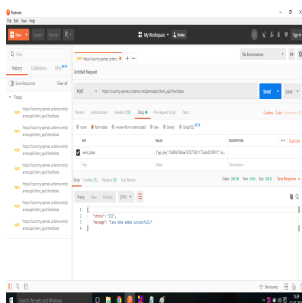

Key
send_data

Value
{"api_key":"8498b784be747077401177a4a501891f","case_data":[{"application_no":"99811"}]}
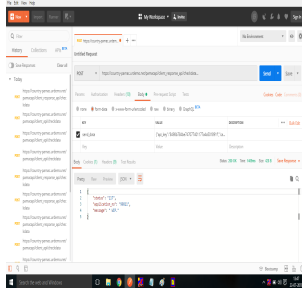

Result will be "Completed" and "WIP".
WIP: Work In Progress.
Please refer word document for more information.

PHP Sample file is attached for import and export.

Hello sir,

Please check the documentation and process as provided and close this point if done. Also let us know how long
will it require if not checked yet.

Hello mam,

As per you email received, please check **attached text** file for api request and response format for both Import and Export api.

Error code excel file also attached for Import and export.

Export Authentication (Send Data from PAMAC to Client)

We need following information from client for client api authentication using O Auth 2.0
1) **Access Token URL**
2) **Username**
3) **Password**
4) **Client ID**
5) **Client Secret**

Note: Screenshot for O Auth 2.0 standard api master attached.
