YAP API

Hi Kailash

As per the concal with Niranjan and Dubai client we have to designed API

Refer the attached mail and as committed please complete the design within 15 days.

Hello team,

Please check this point.
Once discussion is done will start development, post your queries here.
Posted By : Kailash Kumawat
R66
Date & Time : 12-07-2019 09:30:AM
Please find case status and their trigger points.

Email on Thu, 04 Jul 2019 09:21:01 +0530 to Mr. Ganesh and Mr. Niranjan.

Time will be 20 working days for development and testing.
Please keep 5 working days in buffer id there is any delay from YAP response.

They also need to develop API at their end.
If they extend development time then our side time will also extend.
This time line will follow if they testing api will be ready on time.
When you create template for API please use "Calling section" for tele
calling, it will automatically add 3 time rescheduling of meeting.
Please talk with developer for more clarity about template designing.
If there is any change/addition on status given then timeline will
extend.
Please dedicate one engineer full time to achieve timeline.

From today one engineer Shaikh will work to this talk.
No task will assign to him during this period.

Hi,
discussed with Manas sir, need :
1) Template design and mandatory fields while importing case (for validation)
2) JSON format to import cases
3) Is cases imported one case in one request or multiple cases in one request?
4) API key for operations is needed or not?

Date & Time : 12-07-2019 05:20:PM
Hi,
Discussed with Kailash sir, Deepika mam and Manas sir following points to be included for implementation:
1) Need to make changes in Master for trigger point for an API, add one flag or checkbox to enable trigger
points for that API.
2) Use API tables created for Dubai country for dubai database
3) Trigger point will be validated based on template i.e. only for that template respective events will be triggered
Posted By : Khamroddin Shaikh

Date & Time : 15-07-2019 10:32:AM
As discussed with Kailash sir and Manas sir,
Gloabal Template id will be used for trigger point validation
 i.e. at each given trigger point template id will be checked and if that case template id matches in the fixed
template id array in coding used for api response then only response sent else response function will be skipped.
-A fixed array will be used in coding to define API response template id
-All cases of fixed template id will get response at trigger point
-All cases means import/ manually added or through API.

(For Developer)
-A new model apiresponsemodel is used to send response based on status
-At each trigger point template id is checked in constant array of api response template id and case status will be
passed to apiresponsemodel function sendApiResponse(status)
-sendApiResponse(status) function will send response based on status.

Please confirm

Hi,

We have not received template design format from ops team of Dubai.
Posted By : Khamroddin Shaikh
R66
Date & Time : 15-07-2019 05:44:PM
Hi,
delay in getting template design format will extend the development time, as informed above.

(For developer Reference)
1) Created new model Apiresponsemodel for trigger
model : apiresponsemodel
function:sendApiResponse(STATUS,MESSAGE ID,REF.ID)

2) On each trigger point following condition is checked, if true response will be dispatched.
// 15 july 2019 R66 change Example for fe submit
```
                if($countryId == 12 &&
in_array($templateID,json_decode(TEMPLATE_API_RESPONSE)))
                {
                $this->model->load('Apiresponsemodel');
                $ref_no = $this->db->select('ref_no')->where('case_id',$caseId)->get()->row_array();
                $this->Apiresponsemodel->SendApiResponse(Header response,Message ID,$ref_no);
                }
```
3) constant: TEMPLATE_API_RESPONSE
contains the global template id for response on trigger event for all cases of template id

Hi,
Discussed with kailash sir and Manas sir,
for following trigger point it should developed in mobile application
Case status : FE going for meeting

in mobile application, button is added 'going for meeting' or any suitable name along with each case. When fe is going to site that should be pressed so that case status will be reflected in database and response will be sent to client based on that.

and other following two options will be added in web application for tele dropdown for appointment status
Call Not Received
Appointment Fixed

if you have any query discuss with
kailash sir.

Hi,
As due to this, development will get delayed. since, frequent switching from different different big tasks is difficult to manage and understand logic implementation as well as half half changes of each task is difficult to manage requires backup/ re-add changes of different files.
