Productivity MIS for Supervisor | High

Hi,

Require suggestion to calculate Supervisor productivity

We have 2 supervisor
1 who edit & save the case
and the other who does the send to client.

We want both names in report.

Hi,
as we know existing productivity report is based on designation and your new change is based on operations like save and send to client for supervisor but it will create mismatch in report. Please discuss with Kailash sir regarding this.

As,
discussed on concall with deepika mam, now a new change is requested which will contain individual supervisor count about case save and case send to client in Productivity MIS.
      But as posted on 4th April it is clearly mentioned that name of the 2 supervisor will be added to the report, this will increase the development time of the other tasks need to discuss with Kailash sir and Manas Sir.

Hi,
Query implementation is in progress, once complete will share info about it. For now query implemented but not getting output for new column case save count for supervisor. File shared for reference about query, time for execution and output count.

Error : File Not Found.

Hi, checked in cases table most(or all) of the columns are indexed with btree need to convert it to hash according to there purpose for the accurate optimization of index.
Btree is used for comparison based values
Hash is used for equality comparisons

Please refer this link:
https://dev.mysql.com/doc/refman/5.5/en/index-btree-hash.html

following columns are indxed with btree in cases table
case_id,

client_id,
country_id,
zone_id,
center_id,
subcenter_id,
created_id,
modified_id,
veriftype_id,
activity_id,
fe_id,
tele_id,
vendorid,
template_id,
parent_case_id,
case_operation_status,
